APPLICATION FORM FOR **HIGHWAY SAFETY IMPROVEMENT PROGRAM (HSIP)**

Application ID 04-East Palo Alto-1

LAPG 9-A (REV 05/2020)

Page 1 of 4

APPLICATION SUMMARY

This summary page is filled out automatically once the application is completed.

After the application is finalized, please save this PDF form using the exact "Application ID" (shown below) as the file name.

Application ID 04-East Palo Alto-1

Important: Review and follow the Application Form Instructions step-by-step as you complete the application. Completing an application without referencing the instructions will likely result in an incomplete application or an application with fatal flaws that will be disqualified from the ranking and selection process.

Project Location

The Project is located along University Avenue in the City of East Palo Alto. The five signalized intersection with proposed enhancements within the project bounds are Bay Rd. Runnymede St. Woodland Ave, Donohoe St, and Kavanaugh Rd.

Project Description

The Project include improving pedestrian crossings throughout the corridor, installing upgraded signal equipment to increase visibility, and installing protected left phases to separate conflicting vehicle movements.

Total Project Cost

\$1,235,700

HSIP Funds Requested

\$1,235,700

Benefit Cost Ratio (BCR)

APPLICATION FORM FOR HIGHWAY SAFETY IMPROVEMENT PROGRAM (HSIP)

Application ID 04-East Palo Alto-1

LAPG 9-A (REV 05/2020)

Page 3 of 4

1. Project Identification

Describe how the agency identified the project as one of its top safety priorities. Was a data-driven safety evaluation of their entire roadway network completed? Do the proposed project locations represent some of the agency's highest crash concentrations and highest collision types?

(Limited to 5,000 characters)

The University Avenue Safety Enhancements Project addresses years of community concerns along University Avenue. As part of the preparation for this grant application, a jurisdiction wide safety analysis was completed. The analysis identified four intersections along University as having the top five greatest number of collisions by intersection in East Palo Alto. Woodland Avenue was the only intersection in the project extents not in the top five intersections. University Avenue also has the highest occurrence of collisions per intersection than any other roadway in East Palo Alto. Comprehensively addressing these safety deficiencies is the City of East Palo Alto's top safety concern.

The Project would install the proposed improvements at the intersections with the highest instances of collisions in East Palo Alto as well as one intersection that has similar features as high collision locations. In total, at the five locations identified, there have been 61 reported collisions, one of which was fatal and four were severe injury collisions. The most common traffic violation was unsafe speed, accounting for 32% of all reported collisions in the Project area.

The project area had 19 collisions involving a bicycle or pedestrian. Bulb outs, reduced corner curb radius and high visibility crosswalks will help minimize pedestrian exposure to motor vehicles by shortening the pedestrian crossing distance and making pedestrians more visible to motorists. Reduced corner curb radius may also reduce the speed of turning vehicles.

The fatal collision, at Kavanaugh Dr and University Ave, involved a motor vehicle disregarding a traffic signal. The countermeasure chosen for that location will directly address that safety deficiency by installing 12" LED signal heads. Disregarding traffic signals and signs is common along the corridor, accounting for almost 20% of all reported collisions along the corridor.

In addition to the reported collisions, numerous residents have raised concerns about the corridor's traffic speeds, as the corridor is a direct route, connecting the Dumbarton Bridge with the 101 Freeway.

2. Prior Attempts to Address the Safety Issues

List all other projects/countermeasures that have been (or are being) deployed at the location(s) within the last 5 years. Applicants must identify all federal and/or state funds that have been used or approved within the proposed project limits within the last 5 years. Normally HSIP funding cannot be used to construct safety countermeasures at the same locations within 5 years. (Limited to 5,000 characters)

In response to community concerns that have arisen in the last 10 years, the City has worked with the police department to provide enforcement along the corridor. In addition to increased enforcement between 2008 and 2013 the City installed bulb outs, high visibility crosswalk, left turn phase and larger signal heads at Bell St and University Ave.

While these spot improvements have improved conditions a more comprehensive corridor-wide approach can reduce overall fatal and severe crashes of certain types within the corridor more effectively than applying safety improvements at a small number of spot locations and allow a more proactive approach.

3. Other Comments

Explain here if this project has any special circumstances or if you have other comments. Enter "NA" if none. (Limited to 5,000 characters)

HSIP Cycle 10 Application – Engineer's Checklist (For BCR applications)

This application checklist is to be used by the engineer in "responsible charge" of the preparation of this HSIP application, based on the final application and application attachments as submitted to Caltrans. The engineer's initials and stamp should not be placed until the application has been finalized.

The purpose of this checklist is to ensure all of the primary elements of the application are included and the application is free of errors, allowing the application to be accurately ranked in the statewide selection process. Applications with errors in the supporting data will not be considered in the project selection process.

Special Considerations for Engineers before signing and stamping this document attesting to the accuracy of the application:

Chapter 7; Article 3; Section 6735 of the Professional Engineer's Act of the State of California requires engineering calculations or reports be either prepared by or under the responsible charge of a licensed civil engineer. Since the corresponding HSIP application defines the scope of work of a future civil construction project and requires complex engineering principles and calculations which are based on the best data available at the time of the application, the application must be signed and stamped by a licensed civil engineer. By signing and stamping this document, the engineer is attesting to this application's technical information and engineering data upon which local agency's recommendations, conclusions, and decisions are made. This action is governed by the Professional Engineer's Act and the corresponding Code of Professional Conduct, under Sections 6775 and 6735.

| and the | corres | ponding Code of Professional Conduct, under Sections 6775 and 6735. |

| • | | |

a. Show dimension, changes, ROW lines, safety CMs, etc.

| 4. Countermeasure Selec | ction | ١. |
|-------------------------|-------|----|
|-------------------------|-------|----|

Engineer's Initials:

a. The CMs used are appropriate and reasonable based on the application instructions and the Local Roadway Safety Manual.

5. **Crash Data** used in the Benefit Cost Ratio (BCR) calculations:

Engineer's Initials: RT

- a. Must be from a reliable and well documented source
- b. Must be within influence area of CMs and must be applied to CMs using generally accepted traffic engineering principles (Example: If the CM only addresses the northbound lanes of a divided roadway, then southbound crashes should be excluded.)
- c. Must be accurately shown in collision diagrams and collision lists attached to this application
- d. Must be presented in terms of the number of crashes (not the number of injuries and fatalities)
- e. Must be based on the most recent data available and must have a minimum 3 years and maximum 5 vears of data
- 6. **Collision Diagrams** (Shown separately by CM or combined)

Engineer's Initials: RT

- a. Should be to scale with crash locations accurately plotted
- b. Reveal collision patterns necessary to justify CMs
- c. The influence area for each CM is shown separately on the diagrams (unless the areas are identical)
- d. All crashes included in the BCR Calculation must be clearly shown within the influence area of that CM
- e. Totals for each Location and/or CM are shown with crashes segregated based on Crash Severity
- The totals shown match the data in the Collision Lists and the crash data tables in the HSIP Analyzer
- 7. **Collision Lists** (Shown separately by CM or combined)

Engineer's Initials: RT

- a. Totals for each Location and/or CM are shown with crashes segregated based on Crash Severity
- b. If the Lists includes crashes that were not appropriate to include in the BCR calculations, these crashes must be crossed through or removed and not included in the totals
- c. The totals shown match the data in the Collision Diagrams and the crash data tables in the HSIP Analyzer
- d. Each crash is only counted as one, even if there were multiple victims and/or vehicles involved
- 8. Detailed Engineer's Estimate and Project Cost Estimate (HSIP Analyzer Sections I & II)

Engineer's Initials:

- a. All likely construction costs associated with the project are identified and included in Section I (Construction Cost Estimate and Cost Breakdown)
- b. Each of the main project elements are broken out into separate construction items. The costs for the construction items are based on calculated quantities and appropriate corresponding unit costs
- c. Costs for the construction items are distributed among the CMs using a logical method to fairly calculate each CM's cost
- d. "Other Safety-Related" and "Non-Safety-Related" components are properly identified and accounted for
- e. The Total Construction Cost in Section I must match the "Construction Items Total Cost" in Section II (Project Cost Estimate) (automatic in the HSIP Analyzer)
- f. The project costs of all phases must be properly accounted for in Section II

9. Benefit and BCR Calculation (HSIP Analyzer - Sections III & IV)

Engineer's Initials: RJ

- a. The CMs applied are selected properly based on the proposed work for safety improvements;
- b. The crash data time period must be a minimum of 3 years and a maximum of 5 years and the most recent available crash data must be used.
- c. The data in the crash data tables for each location must include only the crashes for the specified crash types and must match those in the Collision Diagrams and the Collison Lists.
- d. The totals for each Location match the totals shown in the Collision Diagrams and Collision Lists
- e. The total project cost in the BCR calculation must match the total project cost in Section II (automatic in the HSIP Analyzer)
- f. The data transferred to the application form must match the data in the HSIP Analyzer

10. Warrant studies/guidance (Check if not applicable)

Check if not applicable (no initials required when not applicable)

| Engineer's | Initials: | |
|------------|-----------|--|
|------------|-----------|--|

a. For new signals, Warrant 4, 5 or 7 must be documented as having been met based on the CA MUTCD. For pedestrian signals (including Pedestrian Hybrid Beacon (HAWK)), the justification may be Warrant 4, 5 and/or 7, or passing the test in Figure 4F-1/4F-2 in Chapter 4F of CA MUTCD.

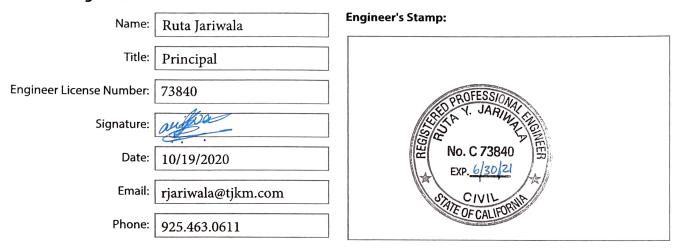

11. Additional narration, documentation, letters of support:

Engineer's Initials: RT

- a. The answers to the "Narrative Questions" in the application form and the HSIP Analyzer are consistent with and support the engineering logic and the calculations in the development of the application's BCR
- b. When needed, clarify non-standard application of countermeasures, crashes and/or costs; appropriate documentation is attached to the application to document the engineering decisions and calculations.

Signature and Stamp Page

Licensed Engineer:

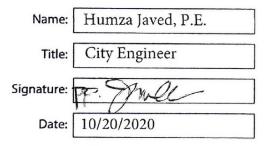

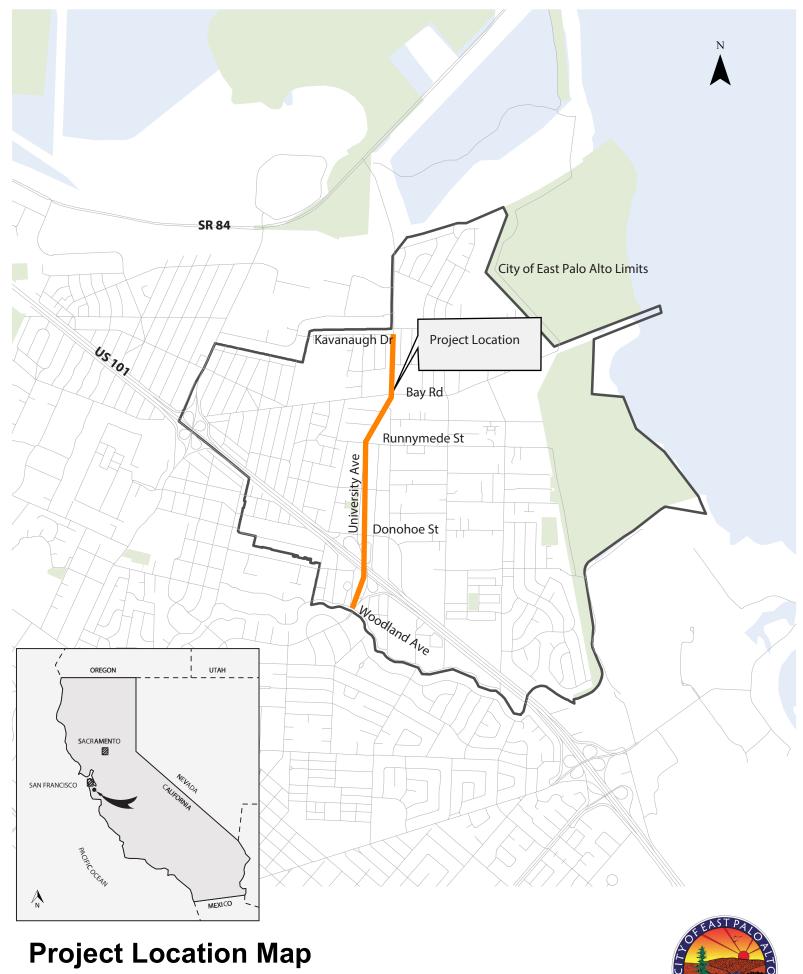

To ensure the application's quality and the agency's commitment to deliver the safety project in an expedited manner, the application must be signed by the Agency's Transportation/Traffic Engineering Manager.

By signing this application, the manager is attesting to:

- 1. All data in the application is accurate and represents the total scope of the planned project;
- 2. The agency understands the Project Delivery Requirements for the HSIP Program and is prepared to deliver the project per these requirements; and
- 3. The agency understands if Caltrans staff determine that any of the above requirements are not met, or data is inaccurate, or the application fails to meet the program guidelines and application instructions, the application will be rejected and will not be eligible to receive HSIP funding. Due to time constraints in the evaluation process, applicants will not be notified until after the selection process is complete. Refer to Application Form Instructions for more information.

Transportation Manager:

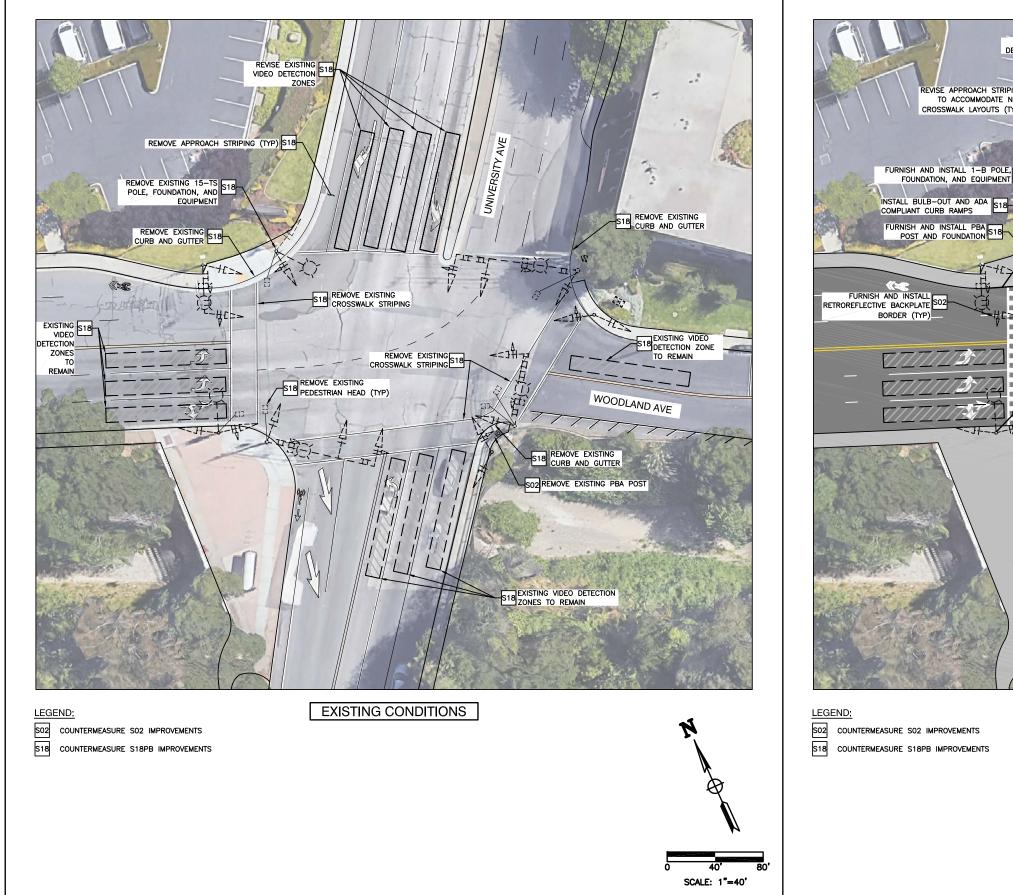

Project Location Map
University Ave HSIP Improvements

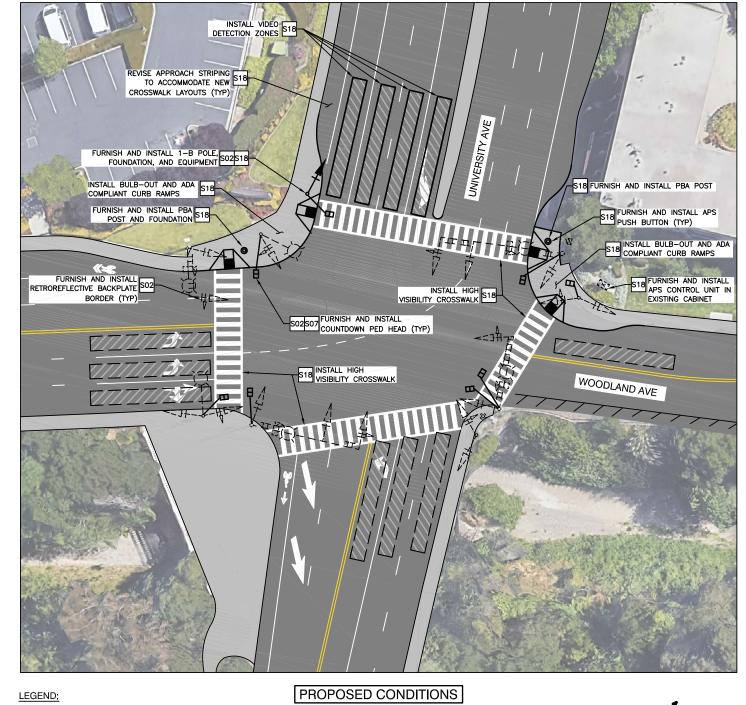

UNIVERSITY AVENUE AND WOODLAND AVENUE

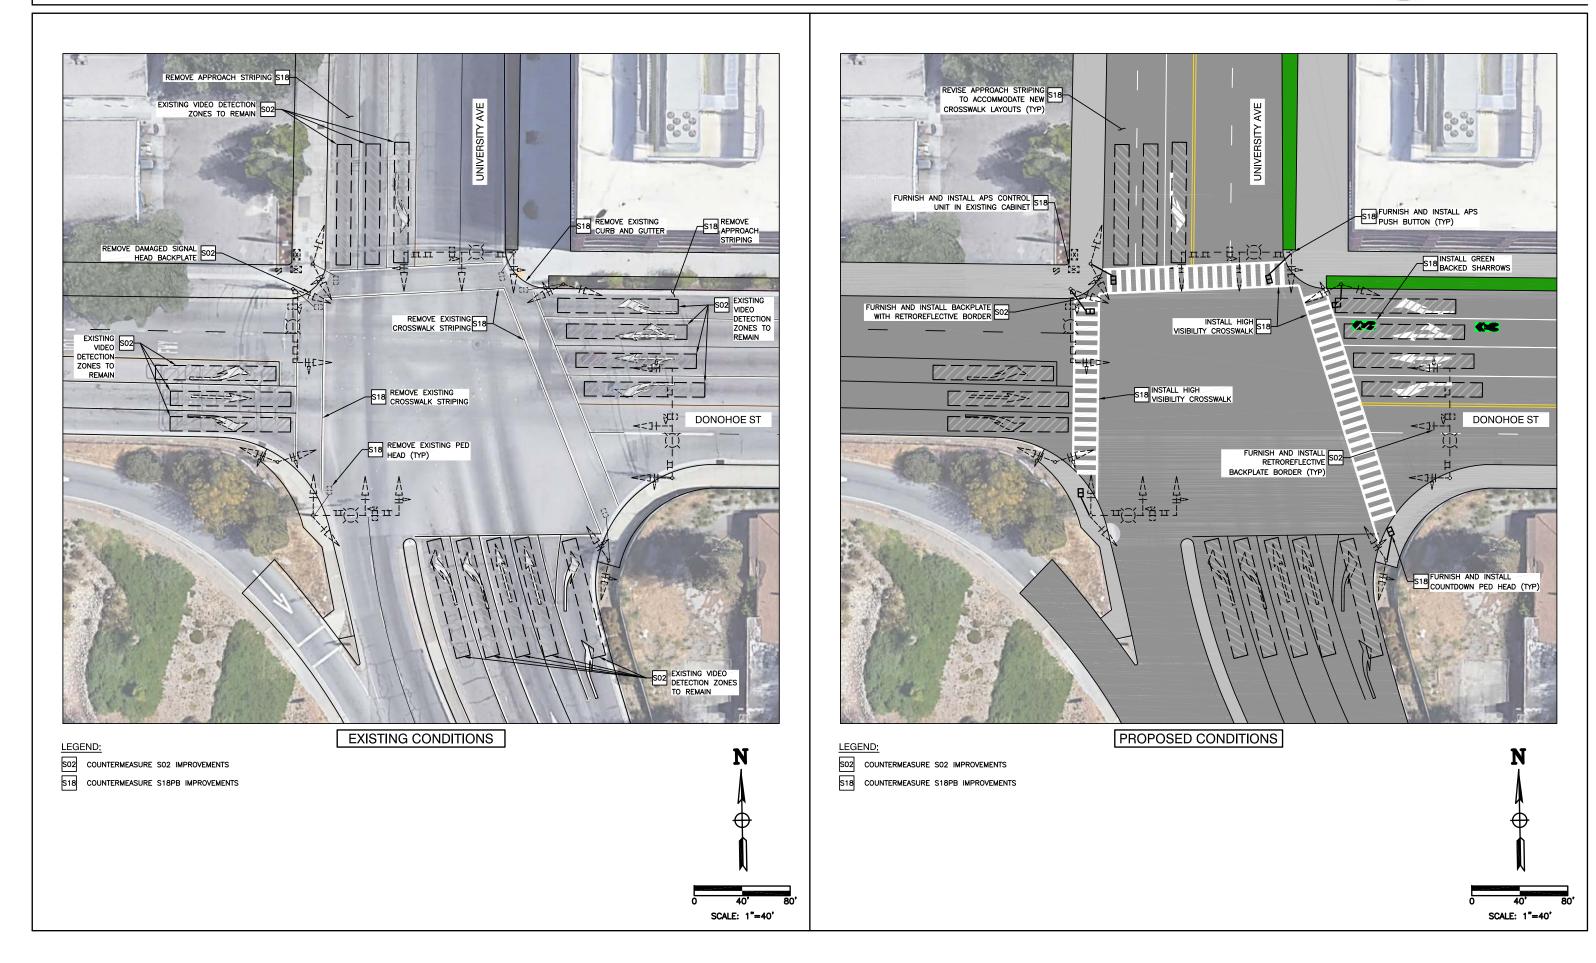

SCALE: 1"=40'

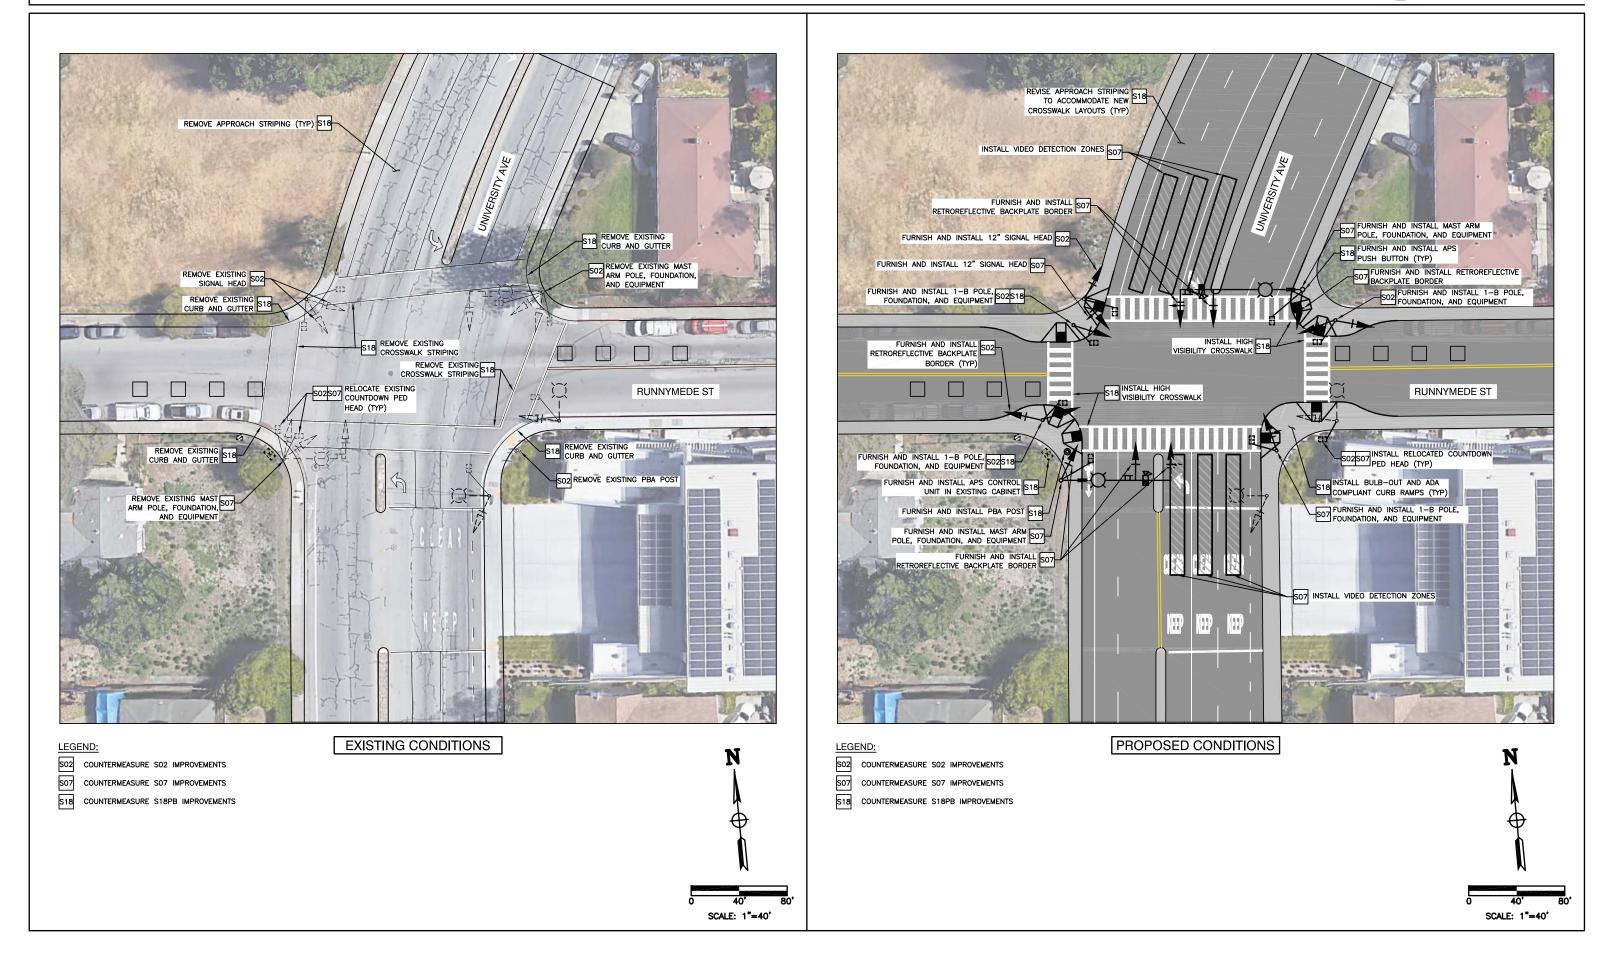

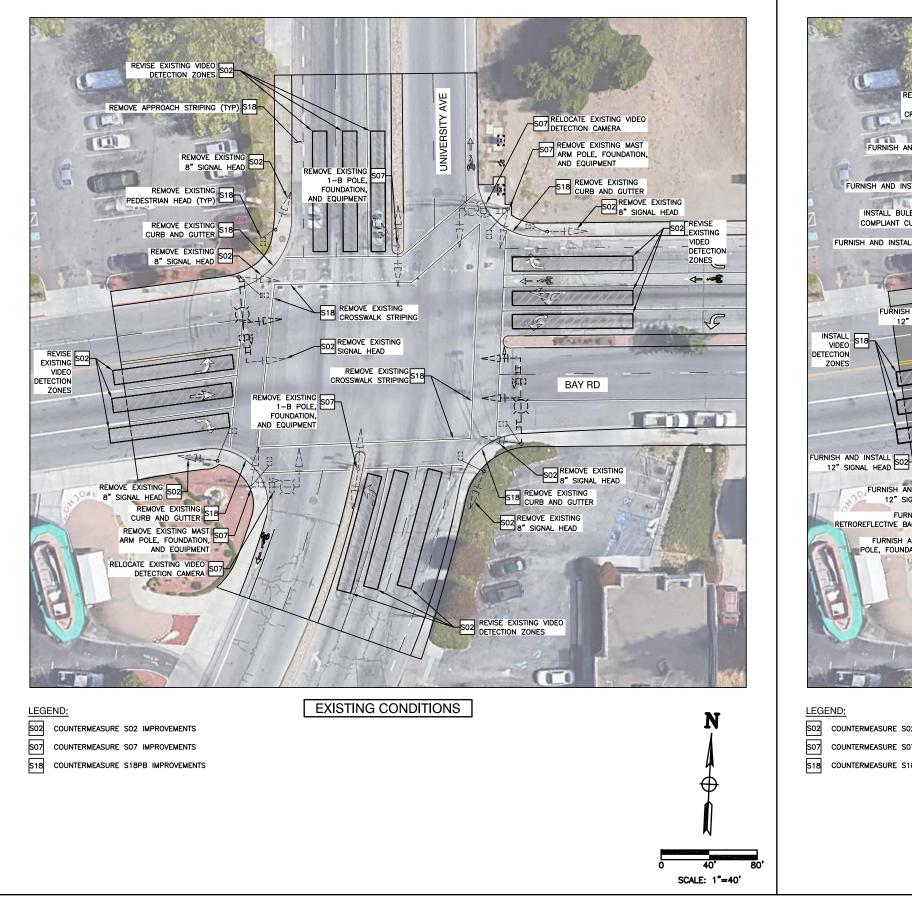

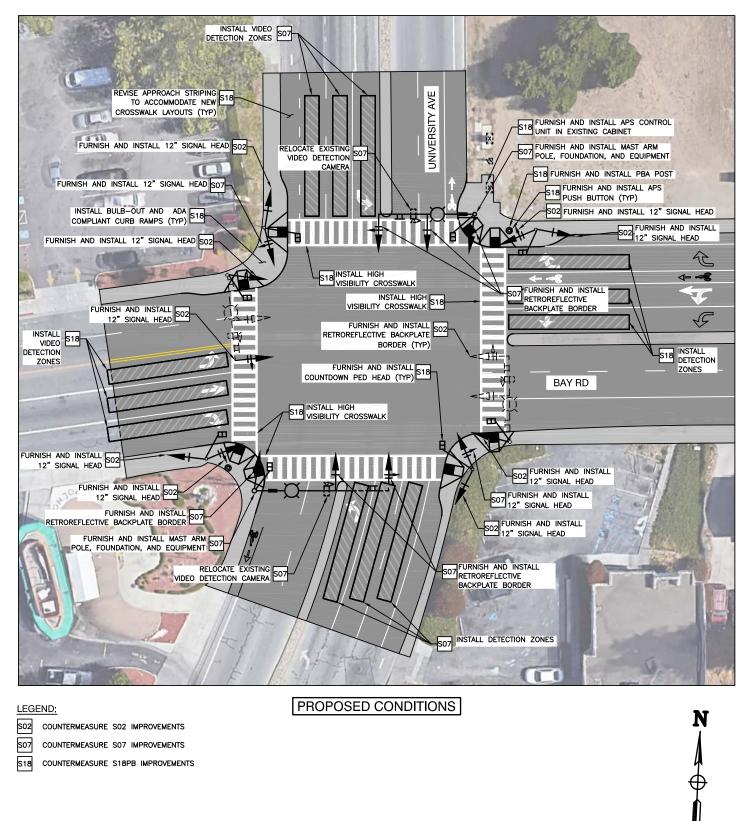

SCALE: 1"=40'

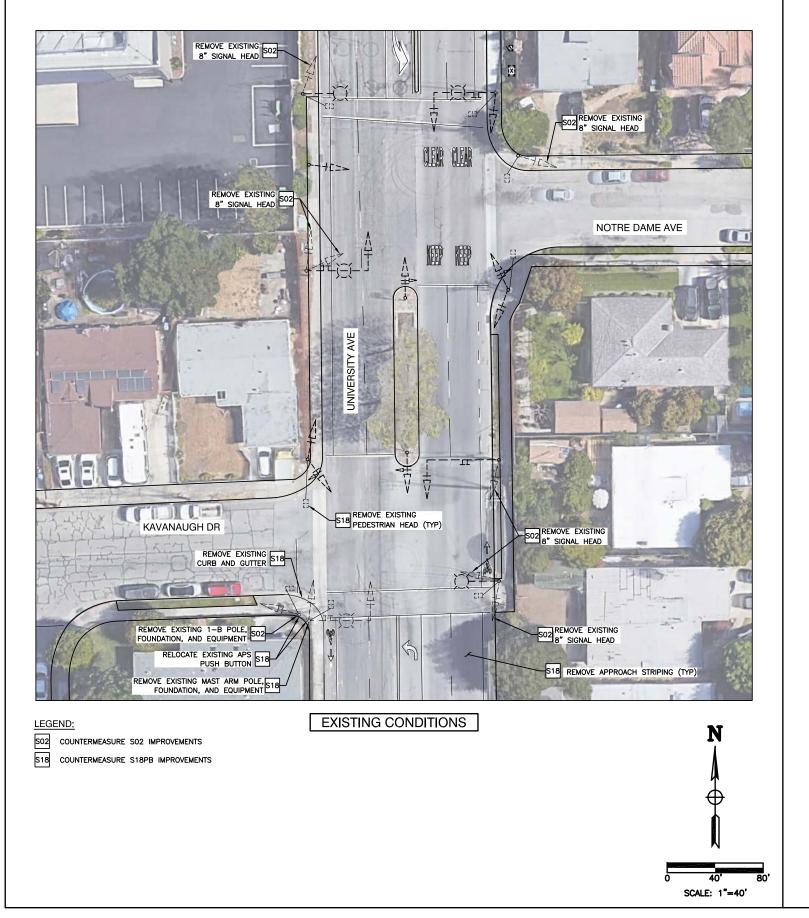

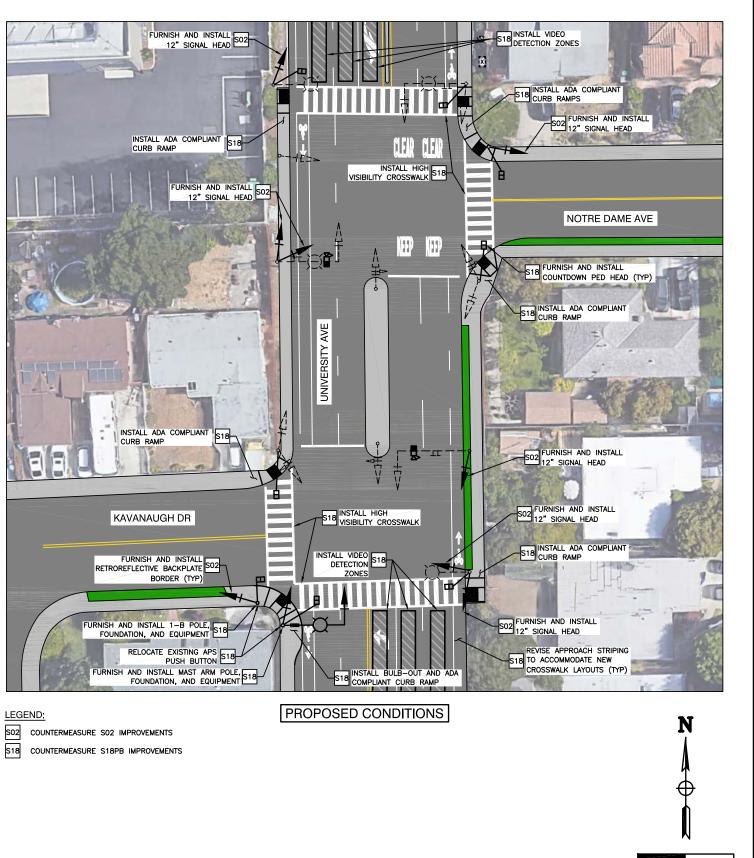

SCALE: 1"=40'

Countermeasure #1: S7 Provide Protected Left Turn Phase

Runnymede St and University Ave: Intersections with no left protection and a history of angled crashes involving left turning, opposing vehicles cabbe reduce with a protected left turn phase

Runnymede St and University Ave: Protected left turn phases can reduce rear end and sideswipe crashes between left turning vehicles.

Countermeasure #2: S02 Improve Signal Hardware

Bay St and University St: 9" signals reduce visibility of signal heads compared to 12" LED signals

Kavanaugh Dr and University St: intersections with a history of disregarding signal violations can be reduced by upgrading signal equipment to larger signal heads reduce the frequency of collisions

Countermeasure #3: S20 Install Pedestrian Crossing Improvements

Woodland Ave and University Ave: Crosswalks in the Project area lack high visiblity crosswalk and advanced stop bars that increase pedestrian visibility

Donohoe St and University Ave: Decreasing corner radius can result in decreased vehicle speeds

Pictures of Existing Conditions University Ave HSIP Improvements

HSIP ANALYZER

Cost Estimate, Crash Data and Benefit Cost Ratio (BCR) Calculation for Highway Safety Improvement Program (HSIP) Application

|---|---|------|-----|-----|-----|-------|------|-------|
|---|---|------|-----|-----|-----|-------|------|-------|

Project's Maximum Funding Reimbursement Ratio = 100.0%

The project's Maximum Funding Reimbursement Ratio is calculated as the least of the FEs of the above countermeasures, minus the percentage of the non-safety related costs in excess of 10%. This is the maximum value allowed to be entered in "HSIP/Total(%)" column in Section II (Project Cost Estimate).

Section II. Project Cost Estimate

All project costs, for all phases and by all funding sources, must be accounted for on this form.

- i. "Total Cost": Round all costs up to the nearest hundred dollars.
- ii. "HSIP/Total (%)": The maximum allowed is the project's Funding Reimbursement Ratio (FRR) as determined in Section I. Click the button to assign the maximum to all, OR enter if not the maximum.
- iii. "HSIP Funds" and "Local/Other Funds" are calculated.

Pay attention to the interactive warning/error messages below the table. The messages, if any, must be fixed, or exceptions should be justified in narrative question No. 3 in the HSIP Application Form.

Project's maximum Funding Reimbursement Ratio (FRR) (from Section I, rounded up to integer)

100 %

To set all "HSIP/Total (%)" in the below table to the above maximum FRR, click "Set":

Set

| Description | Total Cost | HISP/To | tal | HSIP Funds | Local/Other Funds |
|--|---|--------------|------|------------|-------------------|
| | Preliminary E | ngineering (| (PE) | Phase | |
| Environmental | \$41,200 | 74 | % | \$30,488 | \$10,712 |
| PS&E | \$164,800 | 74 | % | \$121,952 | \$42,848 |
| Subtotal - PE | \$206,000 | 74 | % | \$152,440 | \$53,560 |
| The state of the s | Right of W | Jay (ROW) | Phas | se | |
| Right of Way Engineering | \$0 | 74 | % | \$0 | \$0 |
| Appraisals, Acquisitions & Utilities | \$0 | 74 | % | \$0 | \$0 |
| Subtotal - Right of Way (ROW) | \$0 | | % | \$0 | \$0 |
| | Construct | ion (CON) | Phas | e | |

| Construction Items | \$904,800 (Read only - from Section I) | 74 | % | \$669,552 | \$235,248 |
| Subtotal - Construction | \$1,028,400 | 74 | % | \$761,016 | \$267,384 |
| PROJECT TOTAL | \$1,234,400 | 74 | % | \$913,456 | \$320,944 |

| Interactive Warning/Frror Message | 0 |
|-----------------------------------|---|

If there are any messages in the below box, please fix OR explain justification for exceptions in narrative question No 3 in the HSIP application form.

Section III. Crash Data

The benefit of an HSIP safety project is achieved by reducing potential future crashes due to the application of the safety countermeasures (CMs). In this section, you will need to provide information regarding the historical crash data at the project sites.

Different CMs will reduce crashes of different types during the life of the safety improvements. Depending on the selected CMs for the application, you will be required to fill in one or more crash data tables, for any combination of the five crash types (datasets): "All", "Night". Ped & Bike", "Emergency Vehicle", and "Animal" (Each of the later four datasets is a sub-dataset of the "All" dataset.)

Note: If a Roundabout CM (S16 or NS04 or NS05) is selected, additional information (such as roundabout configuration and ADT) is required.

For more information regarding crash data, please refer to the Manual for HSIP Analyzer and the Local Roadway Safety Manual.

1. Please indicate the sources of the crash data. Typical sources include Statewide Integrated Traffic Records System (SWITRS), UC Berkeley SafeTREC TIMS, your locally preferred mapping software (such as Crossroads) or any other data sources.

Berkeley Safe TREC TIMS and Statewide Integrated Traffic Records System

2. Please explain how "incremental approach" has been pursued if CM R15, R16, R17 or R18 is proposed. Please skip this question if none of these CMs are being proposed.

Countermeasure R15 (Widen shoulder), R16 (Curve shoulder widening (outside only)), R17 (Improve horizontal alignment (flatten curves)) and R18 (Flatten crest vertical curve) are not eligible unless they are done as the last step of an "incremental approach". Applicants need to document they have already installed lower cost and lower impact CMs but the crash rate is unacceptably high. What safety improvements have been pursued and installed at the project sites within the last ten years?

III.1 List of Project Locations

List all locations/sites included in this project. Highlighted fields must be filled in.

- 1) Initially there is only one location line in each group. Click "+"/"," to add a new line/delete an existing line;
- 2) Enter location description for each line. The same descriptions will be auto-populated in III.2.

If your project has a large number of locations, please aggregate some locations into one description, e.g. 10 stop controlled intersections, 5 horizontal curves, etc. Please limit the number of rows to no more than 25.

Based on the criteria described on the last page, the locations/sites need to be divided into 3 groups.

| | Location No. | Location Description (Intersection Name or Road Limit or General Description) |
|---|-----------------|--|
| | | Location type for this project: S (Signalized Intersections) |
| | | GROUP No. 1 |
| + | 1 | All |
| | | GROUP No. 2 |
| + | 2 | Ped and Bike |
| | | GROUP No. 3 |
| + | 3 | Protected Left |

III.2: Countermeasures and Crash Data

Countermeasures and Crash Data - Location Group No. 1 of 3

Hide Group Details

Step 1: Check countermeasure(s) to be applied for the locations in this group (countermeasures available are from Page 1).

| No. | Countermeasure (CM) Name | СМ Туре* | Crash Reduction Factor (CRF) | Expected Life (Years) | Crash Type | Federal Funding Eligibility | | |
|---|---|-------------|---------------------------------|-----------------------|------------|--------------------------------|--|--|
| 1 | S07: Provide protected left turn phase (left turn lane already exists) | S | 0.3 | 20 | All | 100% | | |
| 2 | S18PB: Install pedestrian crossing (S.I.) | S | 0.25 | 20 | Ped & Bike | 100% | | |
| | S02: Improve signal hardware: lenses, back-plates with retroreflective borders, mounting, size, and number | S | 0.15 | 10 | All | 100% | | |
| *CM Type: S-Signalized Intersection; NS-Non-Signalized Intersection; R-Roadway. | | | | | | | | |

Step 2: Provide crash data.

2.1 Crash Data Period: must be between 3 and 5 years.

from (MM/DD/YYYY): 01/01/2015 To (MM/DD/YYYY): 12/30/2019 Crash Data Period (years) = 5

2.2 Fill out the crash data table(s) for the crash type(s) as required by the selected countermeasure(s) in Step 1.

Based on the countermeasures selected in Step 1, the crash data types to be provided are:

(1) All

| | Crash Data Table for Crash Type: <u>ALL</u> | | | | | | | | | | | | |
|-----|---|----------------|---------------------|--|-------------------------|--------------|-------|--|--|--|--|--|--|
| No. | Location (from Table III.1) | Fatal (ALL) | Severe Injury (ALL) | Other Visible Injury <mark>(ALL)</mark> | Complaint of Pain (ALL) | PDO (ALL) | Total | | | | | | |
| 1 | All | 1 | 3 | 41 | 26 | 132 | 203 | | | | | | |
| | Total | 1 | 3 | 41 | 26 | 132 | 203 | | | | | | |

III.2: Countermeasures and Crash Data

Countermeasures and Crash Data - Location Group No. 2 of 3

Hide Group Details

Step 1: Check countermeasure(s) to be applied for the locations in this group (countermeasures available are from Page 1).

| No. | Countermeasure (CM) Name | СМ Туре* | Crash Reduction Factor (CRF) | Expected Life (Years) | Crash Type | Federal Funding Eligibility | | |
|---|---|-------------|---------------------------------|-----------------------|------------|--------------------------------|--|--|
| 1 | S07: Provide protected left turn phase (left turn lane already exists) | S | 0.3 | 20 | All | 100% | | |
| 2 | S18PB: Install pedestrian crossing (S.I.) | S | 0.25 | 20 | Ped & Bike | 100% | | |
| 3 | S02: Improve signal hardware: lenses, back-plates with retroreflective borders, mounting, size, and number | S | 0.15 | 10 | All | 100% | | |
| *CM Type: S-Signalized Intersection; NS-Non-Signalized Intersection; R-Roadway. | | | | | | | | |

Step 2: Provide crash data.

2.1 Crash Data Period: must be between 3 and 5 years.

from (MM/DD/YYYY): 01/01/2015 To (MM/DD/YYYY): 12/31/2019 Crash Data Period (years) = 5

2.2 Fill out the crash data table(s) for the crash type(s) as required by the selected countermeasure(s) in Step 1.

Based on the countermeasures selected in Step 1, the crash data types to be provided are:

(1) Ped & Bike

| | Crash Data Table for Crash Type: <u>Pedestrians and Bicyclists Involved</u> (P&B) | | | | | | | | | | | |
|-----|---|----------------|---------------------|--|-------------------------|-----------|-------|--|--|--|--|--|
| No. | Location (from Table III.1) | Fatal (P&B) | Severe Injury (P&B) | Other Visible Injury <mark>(P&B)</mark> | Complaint of Pain (P&B) | PDO (P&B) | Total | | | | | |
| 1 | Ped and Bike | 0 | 2 | 17 | 7 | 2 | 28 | | | | | |
| | Total | 0 | 2 | 17 | 7 | 2 | 28 | | | | | |

III.2: Countermeasures and Crash Data

Countermeasures and Crash Data - Location Group No. 3 of 3

Hide Group Details

Step 1: Check countermeasure(s) to be applied for the locations in this group (countermeasures available are from Page 1).

| No. | Countermeasure (CM) Name | CM Type* | Crash Reduction Factor (CRF) | Expected Life (Years) | Crash Type | Federal Funding Eligibility |
|---|---|-------------|---------------------------------|-----------------------|------------|--------------------------------|
| 1 | S07: Provide protected left turn phase (left turn lane already exists) | S | 0.3 | 20 | All | 100% |
| 2 | S18PB: Install pedestrian crossing (S.I.) | S | 0.25 | 20 | Ped & Bike | 100% |
| 3 | SO2: Improve signal hardware: lenses, back-plates with retroreflective borders, mounting, size, and number | S | 0.15 | 10 | All | 100% |
| *CM Type: S-Signalized Intersection; NS-Non-Signalized Intersection; R-Roadway. | | | | | | |

Step 2: Provide crash data.

2.1 Crash Data Period: must be between 3 and 5 years.

from (MM/DD/YYYY): 01/01/2015 To (MM/DD/YYYY): 12/31/2019 Crash Data Period (years) = 5

 $2.2 \, \text{Fill}$ out the crash data table(s) for the crash type(s) as required by the selected countermeasure(s) in Step 1.

Based on the countermeasures selected in Step 1, the crash data types to be provided are:

(1) All

| | Crash Data Table for Crash Type: <u>ALL</u> | | | | | | |
|-----|---|----------------|---------------------|--|-------------------------|-----------|-------|
| No. | Location (from Table III.1) | Fatal (ALL) | Severe Injury (ALL) | Other Visible Injury <mark>(ALL)</mark> | Complaint of Pain (ALL) | PDO (ALL) | Total |
| 1 | Protected Left | 0 | 1 | 9 | 5 | 18 | 33 |
| | Total | 0 | 1 | 9. | 5 | 18 | 33 |

Section IV. Calculation and Results

Click the "Calculate" button to calculate. The script will first check if there are any errors or inconsistencies in the countermeasure selections and crash data. If errors are detected and displayed below, the errors must be fixed first before you click the "Calculate" button again. If no errors are displayed, the calculation results are provided in this section. Please refer to the Manual for HSIP Analyzer for details regarding possible errors.

Calculate

Benefit Summary:

CITY OF EAST PALO ALTO

Desk of the Mayor

September 29, 2020

Kamal Fallaha, Director of Public Works City of East Palo Alto 2415 University Avenue East Palo Alto, CA 94303

RE: Letter of Support for the City of East Palo Alto HSIP Application

On behalf of the City of East Palo Alto, I am writing to express our support for the City's Highway Safety Improvement Program (HSIP) application for intersections improvements on University Avenue between Woodland Avenue and Bay Road. The grant seeks to fund design, environmental and construction of multimodal safety improvements in the project corridor.

University Avenue is the City's main vein and provides many residents and communities access to US 101, State Route 84, employment centers, shopping, schools, and destinations. On a local level, the City has taken ardent steps to revitalize the community through redevelopment and infrastructure improvements. Recently, the City of East Palo Alto has welcome large employers such as Amazon; and has supported mixed use development which includes office buildings, new civic uses, retail, housing and affordable housing. As the community adds dozens of new development projects, it is pertinent to have the safety in place to accommodate the growth, vehicle volume, and provide and welcome infrastructure that supports pedestrians and bicyclists to travel throughout the City.

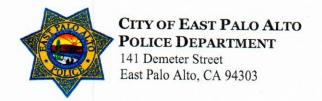

The project supports our City's Vision Zero goals of fatal and severe injury to zero. Improvements will include high visibility crosswalks, pedestrian signal upgrades, ADA curb ramps, signal phasing improvements, and improved signal hardware. These improvements will get the City closer to our goal of eliminating traffic fatalities reducing the number of non-fatal injury collisions by 50% by 2030.

We strongly support the HSIP grant application for traffic safety improvements along University Avenue.

Sincerely,

Regina Wallace-Jones

Mayor, City of East Palo Alto

ALBERT PARDINI
CHIEF OF POLICE

September 29, 2020

Mr. Kamal Fallaha, PE Director of Public Works City of East Palo Alto 1960 Tate Street East Palo Alto, CA 94303

Dear Mr. Fallaha,

The East Palo Alto Police Department support the City of East Palo Alto Highway Safety Improvement Program (HSIP) Cycle 10 Grant Application for the systemic intervention improvements along University Avenue.

The Police Department recognizes the safety concerns along University Avenue for motorists and fully supports the improvements that will reduce collisions along our City's main roadway. It is critical to the City that the community can safely walk and bike to our local and regional destinations by improving the left turn phasing, upgraded signal equipment, adding pedestrian enhancements and upgrades such as high visibility crosswalks, pedestrian signals, and curb ramps.

University Avenue at Runnymede Street has one of the highest traffic collision rates in the City. Safety Improvements along this intersection and along the University Avenue corridor are vital to safety in the City of East Palo Alto. The East Palo Alto Police Department strongly supports the City of East Palo Alto's HSIP Grant application and we are excited about the safety improvements along University Avenue, which is not only the City's main arterial, but also a major regional highway.

Sincerely,

Albert Pardini Chief of Police

C/CAG

RE: Support for City of East Palo Alto's HSIP Application

To Whom it May Concern:

I am writing to express support for the City of East Palo's Highway Safety Improvement Program (HSIP) Cycle 10 Grant Application, for the University Avenue Systemic Intersection Improvement Project.

As a major thoroughfare from the East Bay to the San Francisco Bay Area Peninsula and Silicon Valley, University Avenue experiences large volumes of vehicles travelling throughout the day. For the City's residents and community, it is critical that safety of pedestrians and bicyclists is improved, and overall collisions are reduced along this main roadway. The project will improve the signals between Woodland Avenue and Bay Road by upgrading the equipment, adding pedestrian countdowns and push buttons where needed, adding high visibility crosswalks, improving the curb ramps and adjusting the signal phasing.

As the County's Congestion Management Agency, C/CAG is committed to support local agency in their effort to provide safe and accessible pedestrian facilities to increase mobility, provide access to affordable and reliable transportation options, and reduce air pollutions. I urge your consideration and approval City of East Palo Alto's HSIP Grant application.

Sincerely,

Sandy Wong
Executive Director
