TECHNICAL MEMORANDUM

FINAL – April 22, 2021

To: Akin Okupe, MBA, P.E. (East Palo Alto Sanitary District)

From: Jeffrey Tarantino, P.E. (Freyer & Laureta, Inc.)

Copy: None

RE: Addendum to the March 2015 East Palo Alto Sanitary District Master Plan Update

Freyer & Laureta, Inc. (F&L) is pleased to present this technical memorandum to the East Palo Alto Sanitary District (District) to serve as an addendum to the District's Master Plan Update dated March 2015 (F&L, 2015), herein referred to as "2015 MP Update."

1 Background

1.1 District Collection System Information

The District currently provides wastewater collection service to portions of the communities of Menlo Park and East Palo Alto, located in San Mateo County in the San Francisco Bay Area. The District's service area is primarily residential with several commercial and industrial parcels.

The District's service area, shown on Figure 1, encompasses nearly 1,230 acres, or 1.92 square miles. The District's collection system is a gravity system with approximately 70-percent of the existing pipelines being six-inch (6-in) diameter. The larger collector lines range between 8-in diameter and 24-in diameter including a siphon beneath the San Francisquito Creek. The District replaced the siphon with two new, parallel siphons in 2017.

The District operates and maintains the collection system in accordance with the requirements of the State Water Resources Control Board, as administered through the Statewide SSO Waste Discharge Requirements and RWQCB Sewer System Management Plan guidelines.

According to the District, the existing collection system has not experienced any SSOs for the past 16-years¹. The District General Manager reports status of any SSOs to the Board of Directors during each monthly regular board meeting.

¹ Telephone discussions between Akin Okupe, MBA, P.E. (District General Manager) and Jeffrey Tarantino, P.E. (Freyer & Laureta, Inc.) on April 22, 2021.

1.2 Existing Sanitary Sewer Flows

The 2015 MP Update (F&L, 2015) included documentation of the existing flows observed in the collection system based on a flow monitoring study completed in 2011 and 2012. Please refer to the Appendix L of the 2015 MP Update (F&L, 2015) for the 2011-2012 Sanitary Sewer Flow Monitoring and Inflow/Infiltration Study prepared by V&A Consultants dated June 2012, referred to herein as “I/I study” (VA, 2012).

Table 1 provides the location of each of the flow monitoring sites used for the I/I Study including the approximate size of the basin with Figure 2 showing the limits of each of the basins. Table 2 presents a summary of the flow monitoring results including identification of the average dry weather flow (ADWF), peak dry weather flow (PDWF), and peak wet weather flow (PWWF) plus select calculated peaking factors. The PWWF is based on the 10 year, 24-hour design storm event. Please refer to the I/I Study (VA, 2012) for a detailed presentation of the flow monitoring results including calculation of the design storm flows.

1.3 Existing Hydraulic Model

The District maintains a mathematical model of the existing collection system using the computer software program, HYDRA7. The mathematic model using HYDRA was first developed as part of the Master Plan Update prepared by Kennedy/Jenks Consultants dated September 2002 (K/J, 2002), referred to herein as “2002 MP Update.” F&L’s scope for the 2015 MP Update included updating the existing model to reflect the results of the I/I Study. The current HYDRA7 model reflects the existing conditions of the District’s collection system without consideration of future development.

2 Existing Conditions Evaluation

2.1 Identify System Capacity Deficiencies

The District requested that F&L evaluate the existing conditions of the collection system based on the PWWF information presented in Table 2. The District requested that F&L identified pipeline segments where surcharging is predicated to occur and manholes where sanitary sewer overflows (SSOs) are predicated to occur to determine where the existing system does not have adequate capacity to convey PWWF.

In prior studies, the District had directed F&L to identify portions of the existing system that were predicted to experience SSOs during PWWF and improvements required to reduce the potential for predicated SSOs. The previous evaluations (F&L, 2015) developed potential capital improvements that would result in eliminating predicated SSOs but the collection system was allowed to flow under surcharged conditions. As part of this amendment, the District has updated its standards to allow the collection system to flow full but not under surcharged conditions.

For purposes of this addendum, F&L identified all pipeline segments where the depth over diameter (d/D) is predicated by the HYDRA7 model to be 1.0, which indicates that the pipeline segment is flowing under surcharged conditions. Table 3 identifies all segments in the existing

collection system that are predicated to be flowing surcharged under PWWF conditions as well as identifying the downstream manhole rim elevation and predicated hydraulic grade line (HGL) to further identify which manholes may experience SSOs. Where the downstream HGL is predicated to be above the downstream manhole rim elevation, the hydraulic model results indicate the potential for a SSO to occur at the manhole location.

Figure 3 highlights the pipeline segments under existing conditions that are predicated to flow under surcharge conditions during a PWWF. The manholes where a SSO is predicated to occur are also highlighted on Figure 3.

F&L notes that portions of the existing trunk sewer between Manhole T13 and Manhole T1 where flows are discharged to the Palo Alto Regional Water Quality Control Plant are predicated to flow under surcharged conditions but SSOs are not predicated to occur. As shown in Attachment 1, the HGL under current PWWF is shown to vary throughout the alignment and portions of the trunk sewer flow under surcharge but SSOs are not predicted to occur. The District directed an iterative evaluation of the potential available capacity of the trunk sewer between Manhole T13 and Manhole T1 was evaluated to determine the number of Equivalent Dwelling Units (EDUs) that could be connected to the District's collection system before the HGL is predicted to result in excessive surcharge. An iterative evaluation using increments of 100,000 gallons per day (gpd) of additional flows were added to the HYDRA7 model up to 300,000 gpd with the injection occurring at Manhole T14 and the results are presented in Attachment 1. The District used the results of the iterative evaluation to determine that the District will allow an additional 100,000 gpd, which is 415 EDUs², to be connected to the collection system before improvements to the trunk sewer are required to eliminate predicted excessive surcharging that could lead to SSOs.

2.2 Identify Existing System Improvements.

F&L performed an iterative evaluation of the existing collection system to identify potential capital improvements to eliminate all surcharging and SSOs identified in Table 3 from occurring during PWWF for the existing collection system. The District determined that predicated surcharging within the trunk sewer between Manhole T13 and Manhole T1 was an acceptable condition because the District has not reported any SSOs along the referenced portion of the trunk sewer.

The proposed improvements identified during the hydraulic model evaluation to eliminate surcharging and SSOs are presented in Table 4. The limits of the proposed improvements are presented on Figure 4.

2.3 Opinion of Probable Project Cost

Based on the existing system improvements, F&L developed conceptual opinion of probable project cost (OPPC) for the planning, design, and construction of the identified improvements including District staff administrative and management budgets. The OPPC includes:

² One EDU is equal to 240 gpd based on Section B1.03.2.b of the East Palo Alto Sanitary District Specifications for Design and Construction of Sanitary Collection and Conveyance Facilities dated June 6, 2002.

- Construction budget for proposed pipeline and manhole replacement based on unit pricing for similar projects.
- A construction contingency of 30-percent to reflect the limited level of detail developed for the proposed improvements.
- Allowances for engineering and administrative costs based on industry standards including:
 - 10-percent of construction budget for design;
 - 10-percent of construction budget for environmental and permitting;
 - 15-percent of construction budget for construction management, inspection, and special inspection, and;
 - Five-percent of construction budget for District Administration.

The conceptual OPPC for the proposed improvements described in Section 2.2 is presented in Table 5. Note that the OPPC for the proposed conditions evaluations described in Section 3 follow the same methodology and assumptions for OPPCs.

3 Proposed Conditions Evaluation

3.1 City of East Palo Alto Land Use Changes

The following paragraphs document changes in land use identified in the City of East Palo Alto's (City') 2035 General Plan and the land use at the time of the preparation of the 2015 MP Update. At the time the 2015 MP Update was prepared, the City was beginning the process to update its previous 1999 General Plan and Zoning Ordinance, but the City had not developed a draft general plan update for District's review and comment. Therefore, the 2015 MP Update was based on existing land use information and select specific plans that had been prepared by developers and approved by City Council. The City adopted the 2035 General Plan on October 4, 2016 with the final version being published in March 2017 (2035 General Plan).

Figure 5 presents the zoning at the time of the 2015 MP Update for those parcels where zoning has changed as part of the City's 2035 General Plan with the revised zoning shown on Figure 6. If a parcel is not highlighted on either figure, the zoning at the time of the 2015 Master Plan Update is the same in the 2035 General Plan. To allow easy comparison between the land use changes, the zoning classification shown on Figure 5 utilized the zoning classification from the City's 2035 General Plan. A summary of changes for each parcel is presented in Table 5.

Generally, the changes between the zoning shown on Figure 5 and Figure 6 is changing commercial and office zoning to mixed use or mixed use corridor. The primary changes occurred along University Avenue between Bay Road and Donohoe Street and the existing Target shopping center. Furthermore, some residential zoning changes within the Ravenswood Business District were modified from low density and commercial to high density along Maple Street. Finally, the area along University Avenue west of Highway 101 included changes from commercial to office, mixed use, and medium density residential.

3.2 Calculated Additional Sanitary Sewer Flows

Based on the revised zoning changes, F&L calculated the estimated additional sanitary sewer flows for each of the parcels identified in Table 6. Because the District does not monitor flows

from each of the individual parcels, a multiple step process was followed to calculate the incremental, additional flow by parcel.

The following steps were taken to estimate incremental additional flow by parcel:

1. Existing flow from each parcel was estimated as follows and presented in Table 7;
 - 1.1. The 2019 Tax Year Billing Charges were reviewed to identify the individual parcel billings.
 - 1.2. Based on the individual billings, the Equivalent Dwelling Units (EDU) was calculated by dividing the parcel bill by \$575 per EDU.
 - 1.3. The calculated number of EDUs by parcel was then multiplied by 240 gallons per EDU to estimate the existing sanitary sewer flow from each parcel.
2. Total flow from each parcel based on the 2035 General Plan revised zoning was estimated as follows and presented in Table 8;
 - 2.1. The Maximum and Minimum Allowable Density and Floor to Area (FAR) ratio for each zoning category was identified in the 2035 General Plan;
 - 2.2. Using 50-percent of the range between maximum and minimum allowable density and FAR for each parcel, the estimated total sanitary sewer flow for residential and non-residential was calculated using the unit flow rates from the Section B1.03.2.b of the East Palo Alto Sanitary District Standard Specifications for Design and Construction of Sanitary Collection and Conveyance Facilities date June 6, 2002, herein referred to as "Standard Specifications" (District, 2002).
3. Total additional flow by parcel for both ADWF and PDWF is calculated as follows and presented in Table 9;
 - 3.1. All parcels identified in Table 5 are sorted by Sewer Basin;
 - 3.2. ADWF for existing conditions presented in Table 7 is subtracted from ADWF for future zoning changes presented in Table 8 separated in residential and non-residential flows, and;
 - 3.3. PDWF is calculated by multiplying the ADWF for each parcel by the Sewer Basin PDWF Peaking Factor from Table 2.

The additional ADWF and PDWF by parcel is summarized in Table 9 with the total additional ADWF and PDWF presented at the bottom of the table. The projected total ADWF increase of 1.08 million gallons per day (MGD) is consistent with the projected additional potable water demand of 1.07 MGD presented in the City's 2035 General Plan.

The additional ADWF and PDWF presented in Table 9 are then injected into the HYDRA7 model at the locations shown on Figure 7. In addition, Figure 7 highlights all of the parcels listed in Table 5 including the additional ADWF and PDWF by parcel.

3.3 Identify Development PDWF Impacts and Improvements

The District requested that F&L evaluate the impacts of the proposed developments identified in the 2035 General Plan. The District determined that PDWF operating conditions impacts will

be determined by identifying where the proposed developments result in an increase in the d/D in the District's collection system. The evaluation methodology utilizes the marginal costing technique and will allow the District to determine the potential cost share for each development. The cost share determined by the marginal costing technique would allow the District to potentially develop reimbursement agreement with the developer that requires the accelerated CIP so that as new developments are approved that the future development cost share can be collected to reimburse the first developer. The District will develop the reimbursement that will consider the market value of the existing pipe to be replaced. Similar to the evaluation described in Section 2.2, an iterative evaluation to identify the proposed improvements was performed.

Table 10 presents the results of the PDWF impact evaluation and includes:

- Pipeline segments identified to have the d/D increased by the proposed developments;
- Existing pipeline diameter;
- Existing d/D without the additional flows injected;
- Predicted d/D with the additional flows;
- Proposed pipeline diameter for new improvements, and;
- Predicted d/D with the additional flows and proposed pipeline diameter.

The location and limits of the proposed improvements listed in Table 10 are shown in Figure 8. The conceptual OPPC for the proposed improvements is presented in Table 11 using similar assumptions as described in Section 2.3.

3.4 Identify Development PWWF Impacts and Improvements

The proposed developments impacts during PWWF were also evaluated to determine the improvements that may be required in addition to the existing capacity deficiencies due to the updated District design criteria as described in Section 2. The PDWF injections added during the evaluation described in Section 3.3 were added to the PWWF scenario evaluation described in Section 2.1. The PWWF impacts not only include the District's collection system upstream of the existing siphon (Manhole T33) but full buildout anticipated with the new development also requires the construction of a parallel wet weather trunk sewer pipeline to eliminate surcharging between Manhole T12 and Manhole T1.

Table 12 presents the results of the PWWF impact evaluation for the collection system upstream of Manhole T33 and includes:

- Pipeline segments identified to have the d/D increased by the proposed developments;
- Existing pipeline diameter;
- Existing d/D without the additional flows injected;
- Predicted d/D with the additional flows;
- Proposed pipeline diameter for new improvements, and;
- Predicted d/D with the additional flows and proposed pipeline diameter.

The results of the hydraulic evaluation for the trunkline sewer between Manhole T12 and Manhole T1 is presented in Table 14. The table presents the length, diameter, existing PWWF

d/D, and predicated PWWF d/D with full buildout. The proposed improvement to restore the trunkline to existing operating conditions is to construct a parallel pipeline that will convey PWWF that are greater than experienced under existing conditions.

The location and limits of the proposed improvements listed in Table 12 are shown in Figure 9. The conceptual OPPC for the proposed improvements is presented in Table 13 using similar assumptions as described in Section 2.3.

4 Recommended Capital Improvement Program

The final Capital Improvement Program (CIP) will be determined by the District Board of Directors but it is anticipated to be a compilation of the improvements required to accommodate the new developments as identified in Section 3.3 for PDWF improvements and Section 3.4 for PWWF improvements. The proposed CIP is largely to address the PWWF impacts from development and there are select PDWF improvements where required to restore the d/D under the full build out condition to match existing PDWF d/D.

The recommended CIP is presented in Table 15 and the location of the proposed improvements are shown on Figure 10. The conceptual OPPC for the recommended CIP is presented in Table 16. The final CIP will be determined by the District based on the priorities for City approved developments that have completed its new service application process with the District.

5 Capital Improvement Program Implementation Schedule

The sequence and timing of implementing the CIP will be driven by the proposed developments schedule. As the District receives new service applications, the proposed developments flow path can be evaluated in order to identify the improvements that would be required to accommodate the additional flows. The District can evaluate the individual development's proposed sanitary sewer flows and determine when sufficient number of developments receive approval to discharge to the District's collection system that would require construction of the CIP.

If the District chooses to begin implementing the CIP based on operational conditions, the District would likely begin implementing the improvements beginning upstream of the siphon (Manhole T13). The sequence of construction would likely be driven by District's observations of existing pipe conditions.

6 Next Steps

F&L understands that the Master Plan Addendum will be presented to District Board of Directors for final direction on the CIP.

T26-T25	306	18	0.52	3.95	1.33
T25-T24	282	18	1	3.66	1.22
T19-T18	500	21	1	1.12	-0.42
T18-T17	540	21	1	0.96	-1.65
T17-T16	482	21	1	1.34	-2.74

Notes

- (1) Segment indicates the upstream and downstream manholes used to find flow and Depth over Diameter value.
- (2) Pipe Diameter directly downstream of upstream manhole.
- (3) Calculated by dividing the depth of flow by pipe diameter. This value is evaluated directly downstream of specified manhole under the existing PWWF condition.
- (4) Manhole rim elevation from HYDRA7 model.
- (5) HGL from HYDRA7 model

Abbreviations

- d/D: Depth over Diameter
- HGL: Hydraulic Grade Line
- PWWF: Peak Wet Weather Flow

Notes

Table 4
Capital Improvements to Eliminate
Surcharge and SSOs Under Existing PWWF
EPASD Master Plan Update
East Palo Alto, California

Segment (1)	Length (Feet) --	Existing Diameter (Inches) (2)	Existing d/D (3)	Proposed Diameter (Inches) (2)	Proposed d/D (4)
----------------	---------------------	---	---------------------	---	---------------------

- (1) Segment indicates the upstream and downstream manholes used to find flow and Depth over Diameter value.
- (2) Pipe Diameter directly downstream of upstream manhole.
- (3) Calculated by dividing the depth of flow by pipe diameter. This value is evaluated directly downstream of specified manhole under the existing PWWF condition.
- (4) Calculated by dividing the depth of flow by pipe diameter. This value is evaluated directly downstream of specified manhole under the existing PWWF condition including pipe size upgrades.

Abbreviations

d/D: Depth over Diameter

PWWF: Peak Wet Weather Flow

SSOs: Sanitary Sewer Overflows

Notes

- (1) Assessor Parcel Number (APNs) for all parcels is provided and street addresses are included when the parcel has an assigned address. If no address is available, the cell is left blank.
- (2) 2014 zoning is the zoning for the parcel at the time of the preparation of the 2015 Master Plan for the East Palo Alto Sanitary District.
- (3) 2035 Zoning is for the City of East Palo Alto's recently adopted General Plan.

Notes:

- (1) Properties that have changed Zoning Figure 4-12: General Plan Land Use and Figure 4-16: Ravenswood / 4 Corners TOP Specific Plan Land Use City of East Palo Alto General Plan "Existing Conditions Report, February 2014" Vs Figure 4-2: General Plan Land Use Designations City of East Palo Alto General Plan "Vista 2035, Final Version: March 2017"
- (2) Land use from EDS (Engineering Data Services) Service Fee Calculation sheet.
- (3) Equivalent Dwelling Units. Unit= (Past Billing amount from EDS)/\$575
- (4) ADWF Equivalent Dwellings, calculated by multiplying 240 gallons per dwelling unit per day by the total number of units. Based on Section B1.03.2.b of the East Palo Alto Sanitary District Standard Specifications for Design and Construction of Sanitary Collection and Conveyance Facilities date June 6, 2002. Units converted from GPD (Gallons Per Day) to CFS. Based Based off 24 hours in a day, 60 minutes in a hour, and 60 seconds in a minute.

Abbreviations

ADWF: Average Dry Weather Flow
APN: Assessors Parcel Number
CFS: Cubic Feet per Second

MGD: Million Gallons Per Day
PDWF: Peak Dry Weather Flow

114-450-010 to 114-460-300	1765 EAST BAYSHORE RD, EAST PALO ALTO	Mixed Use Corridor	65 du/a; 1.75 FAR	1.04	34	39,597	8,103	3,960

Notes:

(1) Properties that have changed Zoning Figure 4-12: General Plan Land Use and Figure 4-16: Ravenswood / 4 Corners TOP Specific Plan Land Use City of East Palo Alto General Plan "Existing Conditions Report, February 2014" Vs Figure 4-2: General Plan Land Use Designations City of East Palo Alto General Plan "Vista 2035, Final Version: March 2017"

(2) du/a and FAR based on Section 4 Table 4-2 of City of East Palo Alto General Plan "Vista 2035, Final Version: March 2017"

(3) Square footage of parcel divided 43,560 feet (1 Acre Equivalent).

(4) Average Dwelling units per number of acres in parcel is calculated to be 50% of the maximum number of units allowed in the General Plan.

(5) Calculated by multiplying 50% of the maximum FAR for the land use allowed by the General Plan and square feet of parcel.

(6) ADWF Residential Dwellings, calculated by multiplying 240 gallons per dwelling unit per day by the total number of units. Based on Section B1.03.2.b of the East Palo Alto Sanitary District Standard Specifications for Design and Construction of Sanitary Collection and Conveyance Facilities date June 6, 2002. Units converted from GPD (Gallons Per Day) to CFS. Based off 24 hours in a day, 60 minut a hour, and 60 seconds in a minute.

(7) ADWF Non-Residential , calculated by multiplying 0.1 gallons per day per square foot. Based on Section B1.03.3 for Office and Retail of the East Palo Alto Sanitary District Standard Specifications for Design and Construction of Sanitary Collection and Conveyance Facilities dated June 6, 2002. Units converted from GPD (Gallons Per Day) to CFS assuming flows are discharged over 24 hours in a day.

Abbreviations

ADWF: Average Dry Weather Flow

MGD: Million Gallons Per Day

APN: Assessors Parcel Number

PDWF: Peak Dry Weather Flow

CFS: Cubic Feet per Second

Notes:

- (1) Properties that have changed Zoning Figure 4-12: General Plan Land Use and Figure 4-16: Ravenswood / 4 Corners TOP Specific Plan Land Use City of East Palo Alto General Plan "Existing Report, February 2014" Vs Figure 4-2: General Plan Land Use Designations City of East Palo Alto General Plan "Vista 2035, Final Version: March 2017"
- (2) Per Section 5.3.2 of the "East Palo Alto Sanitary District Master Plan Update, March 2015". For modeling scenarios, peak sanitary flows based on the collected data. Collected data for P for each sub-basin are shown in Table 5.
- (3) Delta Residential Flows is calculated by taking the Average Daily Flow for Residential areas from Table 3 minus the Average Daily Flow for Residential area from Table 2. If calculation results in a decrease of flow, the flow change is shown as "0" because it is not anticipated that the land use changes will result in flow reductions.
- (4) Delta Non-Residential Flows is calculated by taking the Average Daily Flow for Non-Residential areas from Table 3 minus the Average Daily Flow for Non-Residential areas from Table 2.
- (5) ADWF Residential Dwellings, calculated by multiplying 240 gallons per dwelling unit per day by the total number of units. Based on Section B1.03.2.b of the East Palo Alto Sanitary District Standard Specifications for Design and Construction of Sanitary Collection and Conveyance Facilities date June 6, 2002. Units converted from GPD (Gallons Per Day) to CFS based off 24 hours in a day, 60 minutes in an hour, and 60 seconds in a minute.
- (6) ADWF Non-Residential , calculated by multiplying 0.1 gallons per day per square foot. Based on Section B1.03.3 for Office and Retail of the East Palo Alto Sanitary District Standard Specifications for Design and Construction of Sanitary Collection and Conveyance Facilities dated June 6, 2002. Units converted from GPD (Gallons Per Day) to CFS. Based off 24 hours in a day, 60 minutes in an hour, and 60 seconds in a minute.
- (7) PDWF Residential Dwellings, calculated by multiplying Average Dry Weather Flows (5) by the Peaking Factor (2). Units converted from GPD to CFS. Based off 24 hours a day, 60 minutes in an hour, and 60 seconds in a minute.
- (8) PDWF Non-Residential, calculated by multiplying Average Dry Weather Flows (6) by the Peaking Factor (2). Units converted from GPD to CFS. Based off 24 hours a day, 60 minutes in an hour, and 60 seconds in a minute.
- (9) ADWF based on sewer demand documented in the January 7, 2020 University Plaza Phase 2 memorandum, the project is anticipated to increase ADWF by 9,946 gpd.
- (10) ADWF based on sewer demand documented in the July 30, 2019 2331 University Ave Engineering Proposal , the project is anticipated to increase ADWF by 7,680 gpd.
- (11) ADWF identified in the fee calculation for the University Plaza Phase 1 project included in the June 29, 2015 email from Freyer & Laureta, Inc. Anticipated increase to ADWF by 13,528 gpd. The projected ADWF was split between the three parcels.
- (12) ADWF based on sewer demand documented in the December 18, 2019 Mid-Pen Housing Engineering Proposal , the project is anticipated to increase ADWF by 32,640 gpd. The projected ADWF was split between the three parcels.
- (13) Development has already occurred or not possible at proposed parcel.
- (14) ADWF based on sewer demand documented in the March 4, 2020 Light Tree Apartments memorandum, the project is anticipated to increase ADWF by 21,841 gpd.
- (15) ADWF based on sewer demand documented in July 8, 2020 Weeks Street Townhomes Sewer Flow Evaluation Tables. ADWF is anticipated to increase 2,400 gpd.
- (16) ADWF based on sewer demand documented in May 8, 2018 1201 Runnymede Water Demand Analysis by Engineering Consultants Inc. ADWF is anticipated to increase 3,615 gpd.
- (17) ADWF based on sewer demand documented in August 20, 2020 2519 Pulgas Ave memorandum. ADWF is anticipated to increase 5,881 gpd.
- (18) ADWF based on sewer demand documented in August 19, 2020 Woodland Park Apartments memorandum. ADWF is anticipated to increase 106,560 gpd. The projected ADWF was split between the fourteen parcels.

Abbreviations

ADWF: Average Dry Weather Flow
APN: Assessors Parcel Number
CFS: Cubic Feet per Second

MGD: Million Gallons Per Day
PDWF: Peak Dry Weather Flow

Total (CFS)				1.6705	2.6297
Total (MGD) (3)				1.08	1.70

Notes:

- (1) Increase in ADWF and PDWF is the difference between the estimated flows from 2014 presented in Table 7 and the projected flows based on the Vision 2035 General Plan Update presented in Table 8.
- (2) ADWF and PDWF assumes that flows are contributed from all land uses over a standard 24-hour day.
- (3) Total ADWF Increase in MGD is consistent with the projected increase in water demand in the Year 2040 presented in Section 3 of the City of East Palo Alto's 2015 Urban Water Management Plan date June 2016. The City of East Palo Alto water supply allocation from the San Francisco Public Utilities Commission was 1.96 MGD and the General Plan projects a maximum demand of 3.03 MGD in the Year 2040 representing an increase of 1.07 MGD in average day demand.
- (4) Flows from parcels based on New Service Applications submitted to the District. Please see Table 8 for calculation of injected flows.

Abbreviations

ADWF: Average Dry Weather Flow
APN: Assessors Parcel Number
CFS: Cubic Feet per Second

MGD: Million Gallons Per Day
PDWF: Peak Dry Weather Flow

Notes

- (1) Manhole used to find flow and Depth over Diameter value.
- (2) Pipe Diameter directly downstream of Manhole.
- (3) Calculated by dividing the depth of flow by pipe diameter. This value is evaluated directly downstream of specified manhole under the existing PDWF condition.
- (4) Calculated by dividing the depth of flow by pipe diameter. This value is evaluated directly downstream of specified manhole under the existing PDWF condition including proposed injection
- (5) Calculated by dividing the depth of flow by pipe diameter. This value is evaluated directly downstream of specified manhole under the existing PDWF condition including proposed injection and pipe size upgrades.
- (6) d/D improves with same size HDPE upgrade.
- (7) Sizing of pipes in district map and model differed. Sizing found in model was used as basis for design.

Abbreviations

d/D: Depth over Diameter

Notes

- (1) Manhole used to find Q and Depth over Diameter value.
- (2) Pipe Diameter directly downstream of Manhole.
- (3) Calculated by dividing the depth of flow by pipe diameter.
This value is evaluated directly downstream of specified manhole under the existing PWWF condition including proposed injections.
- (4) Calculated by dividing the depth of flow by pipe diameter.
This value is evaluated directly downstream of specified manhole under the existing PWWF condition including proposed injections and pipe size upgrades.
- (5) d/D improves with same size HDPE upgrade.
- (6) The new 18-inch diameter pipeline is the wet weather parallel pipeline.
See Table 14 for model data.

Notes

- (1) Manhole used to find Q and Depth over Diameter value.
- (2) Pipe Diameter directly downstream of Manhole.
- (3) Calculated by dividing the depth of flow by pipe diameter.
This value is evaluated directly downstream of specified manhole under the existing PWWF condition including proposed injections.
- (4) Calculated by dividing the depth of flow by pipe diameter.
This value is evaluated directly downstream of specified manhole under the existing PWWF condition including proposed injections and pipe size upgrades.
- (5) d/D improves with same size HDPE upgrade.
- (6) The new 18-inch diameter pipeline is the wet weather parallel pipeline.

Abbreviations

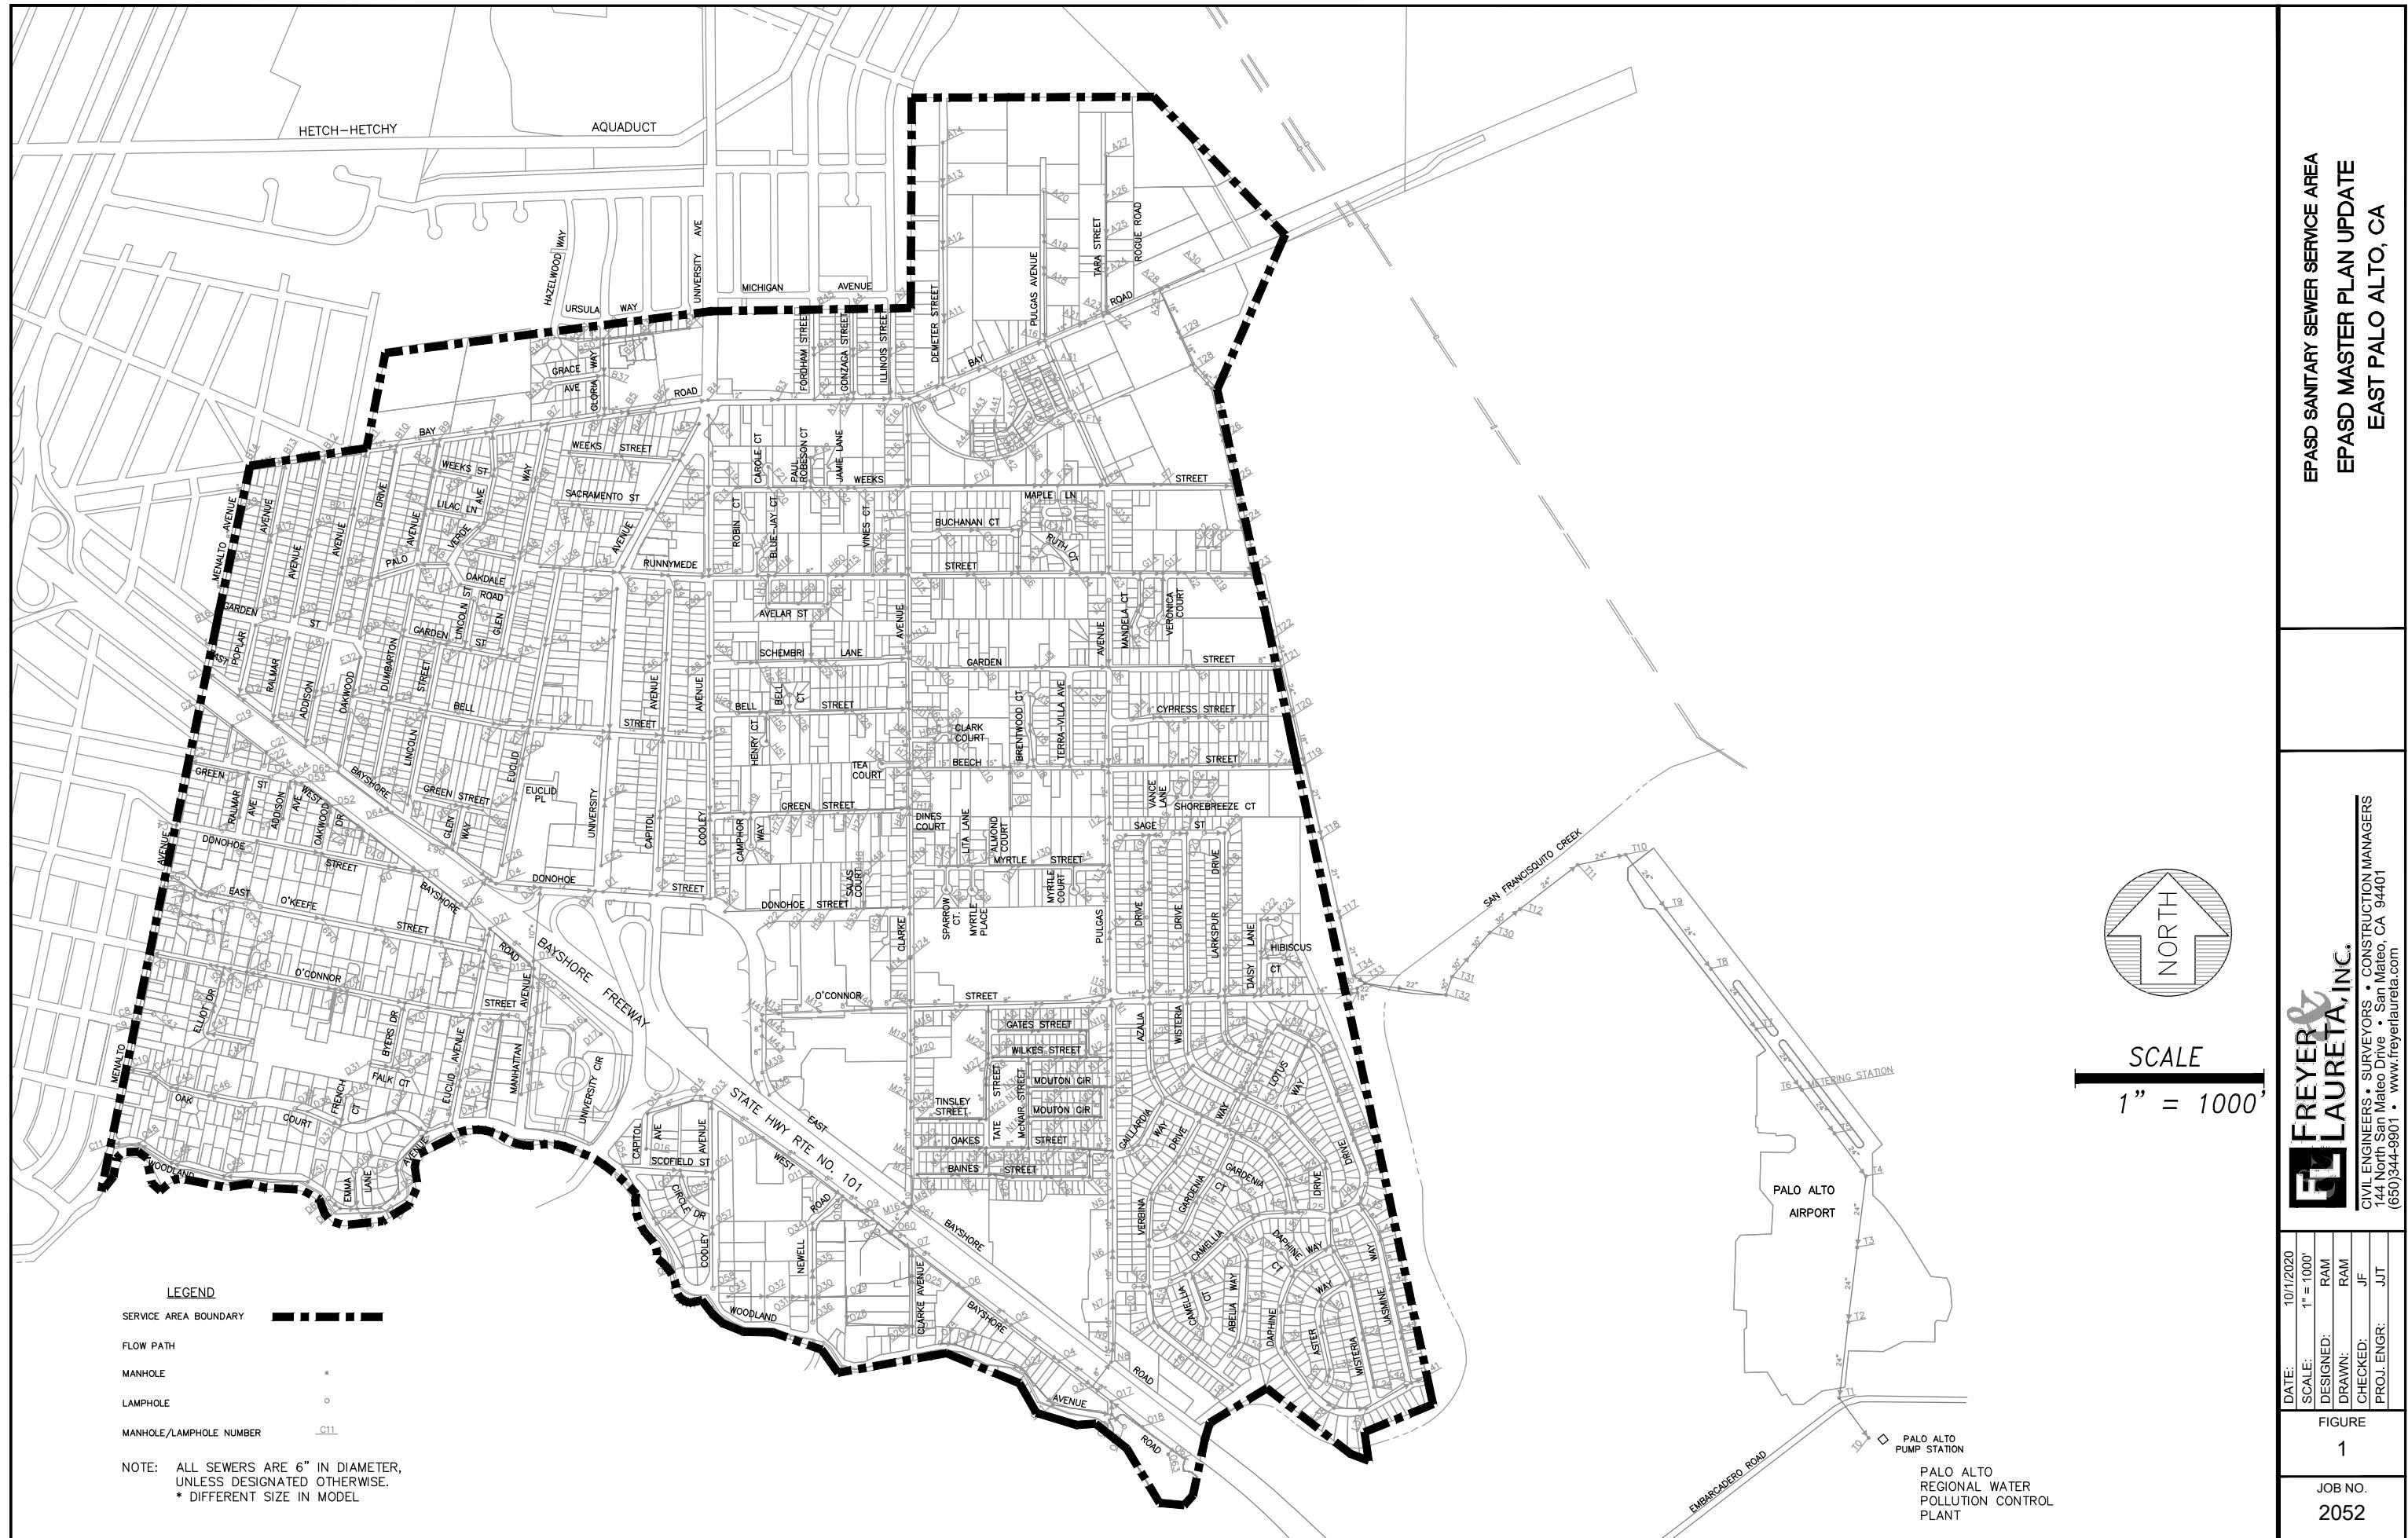

d/D: Depth over Diameter

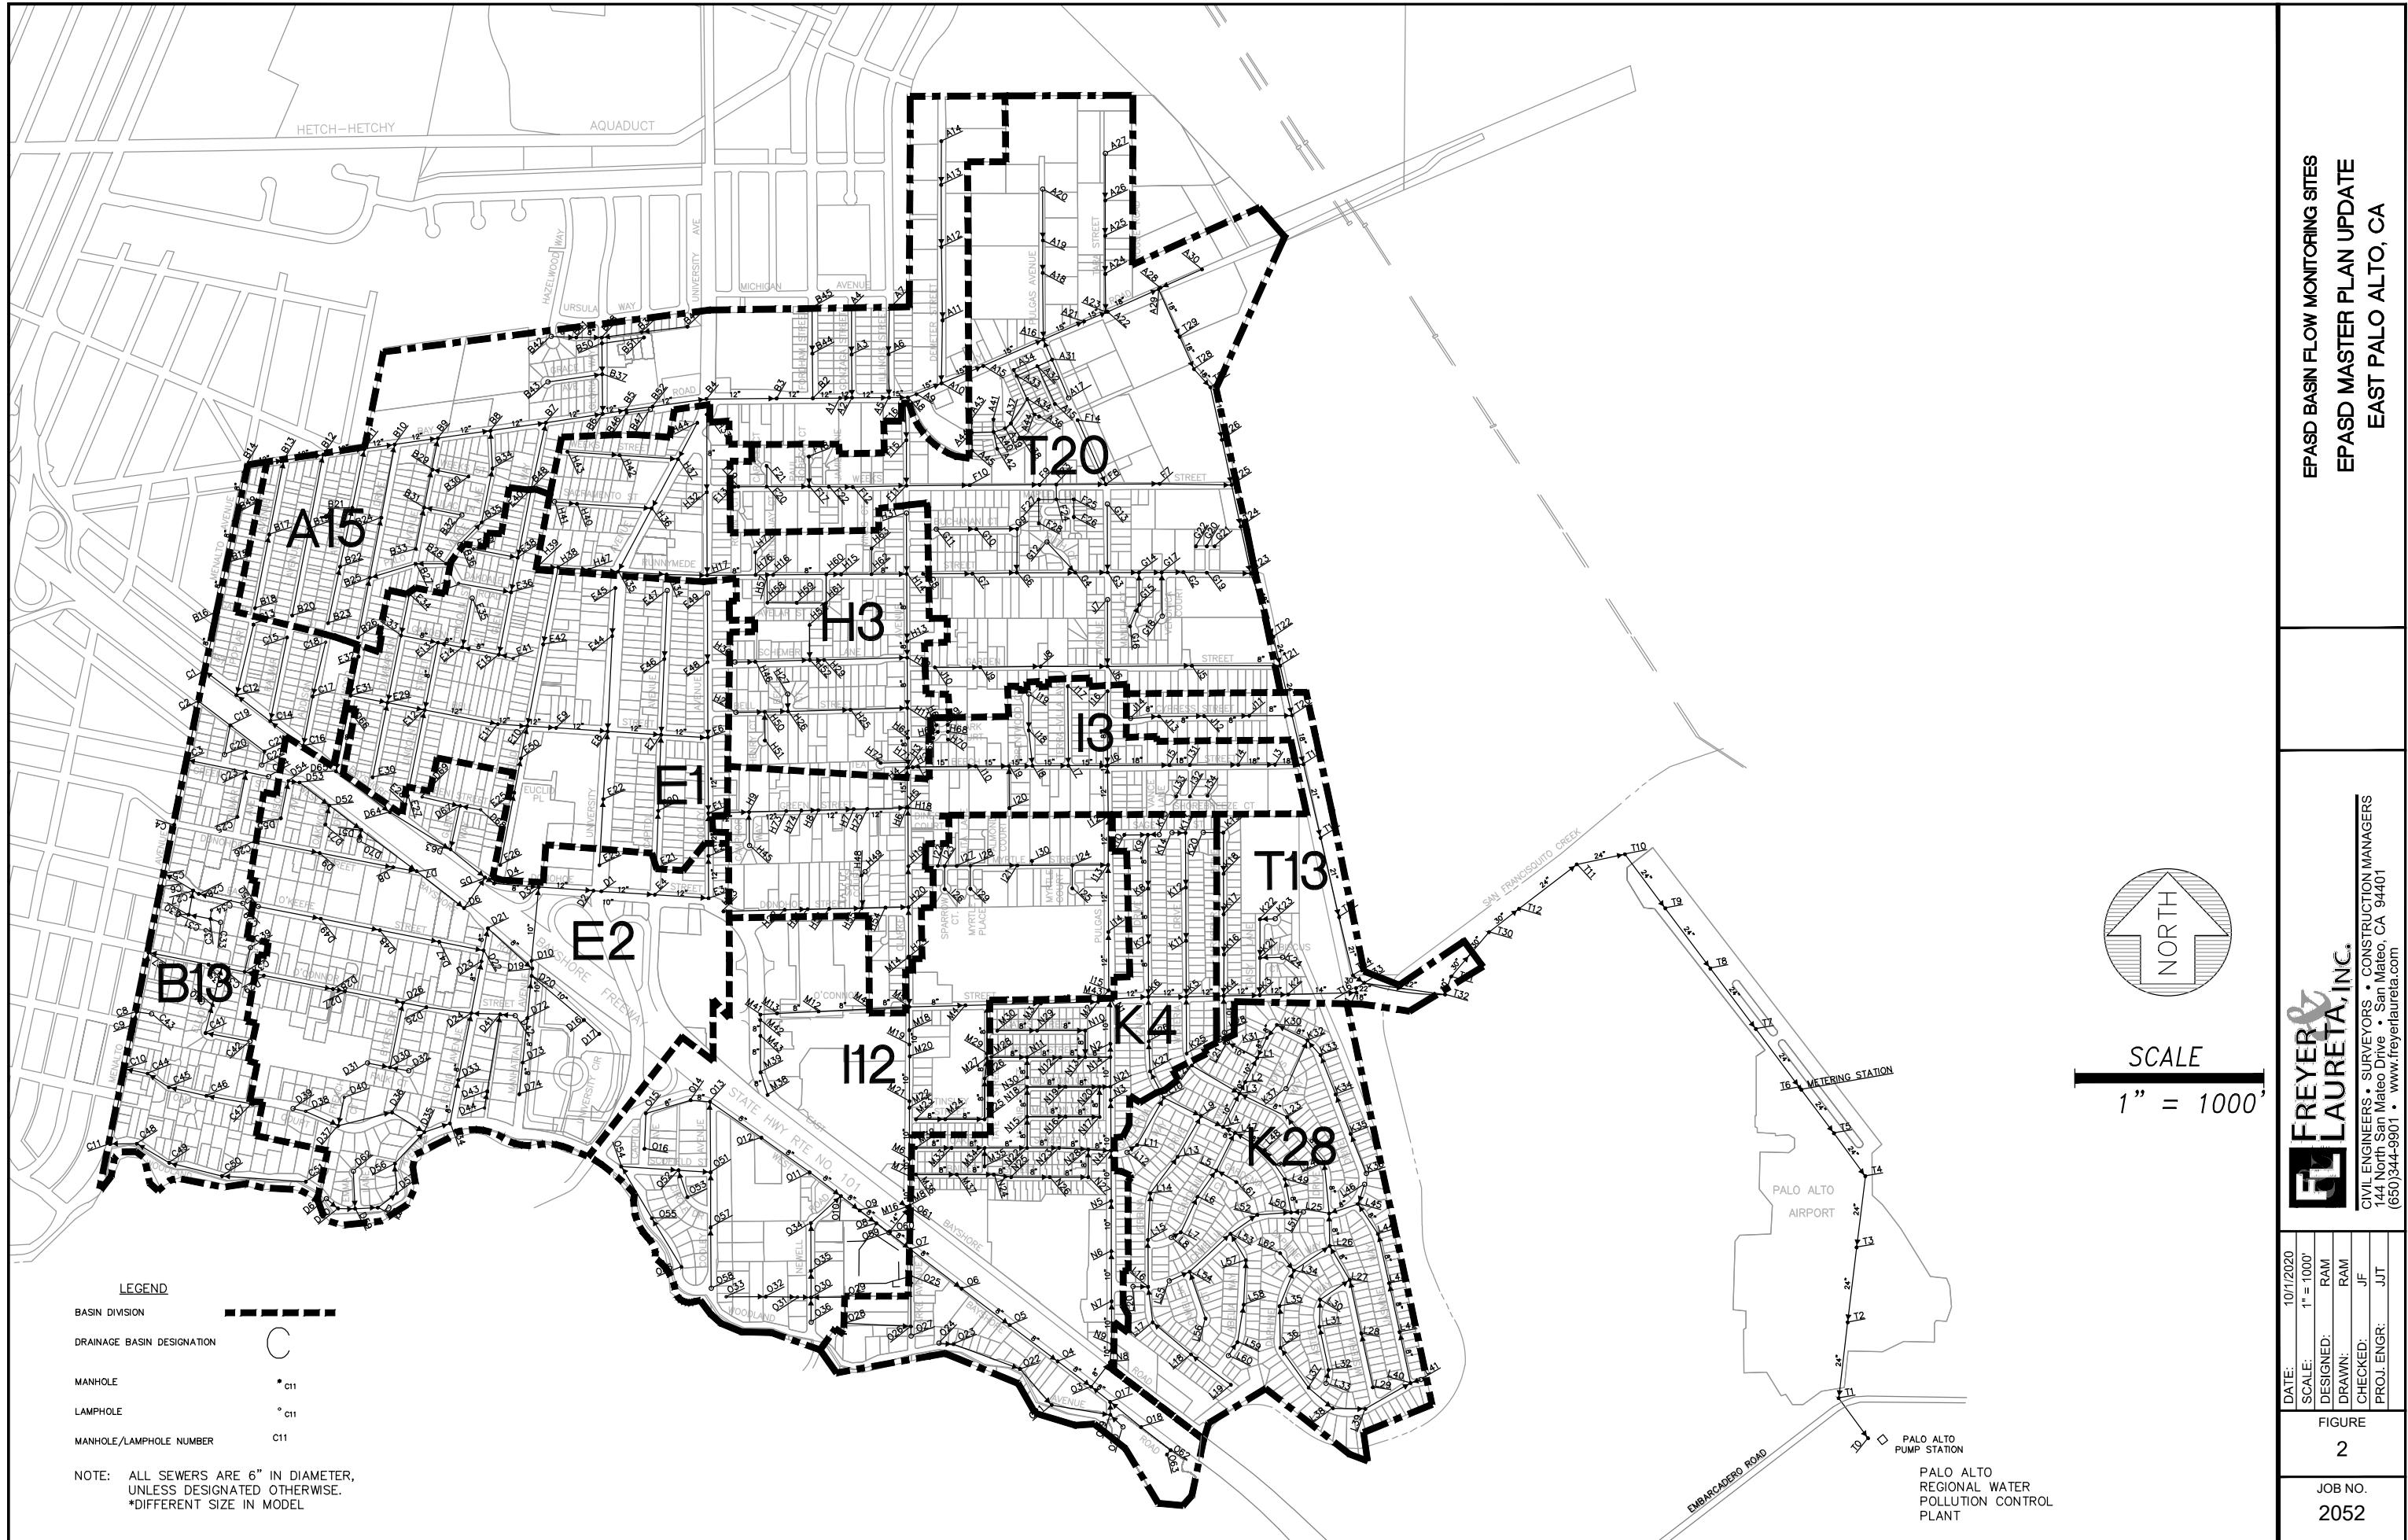

Table 17
Conceptual OPPC for Proposed CIP (1)
EPASD Master Plan Update
East Palo Alto, California

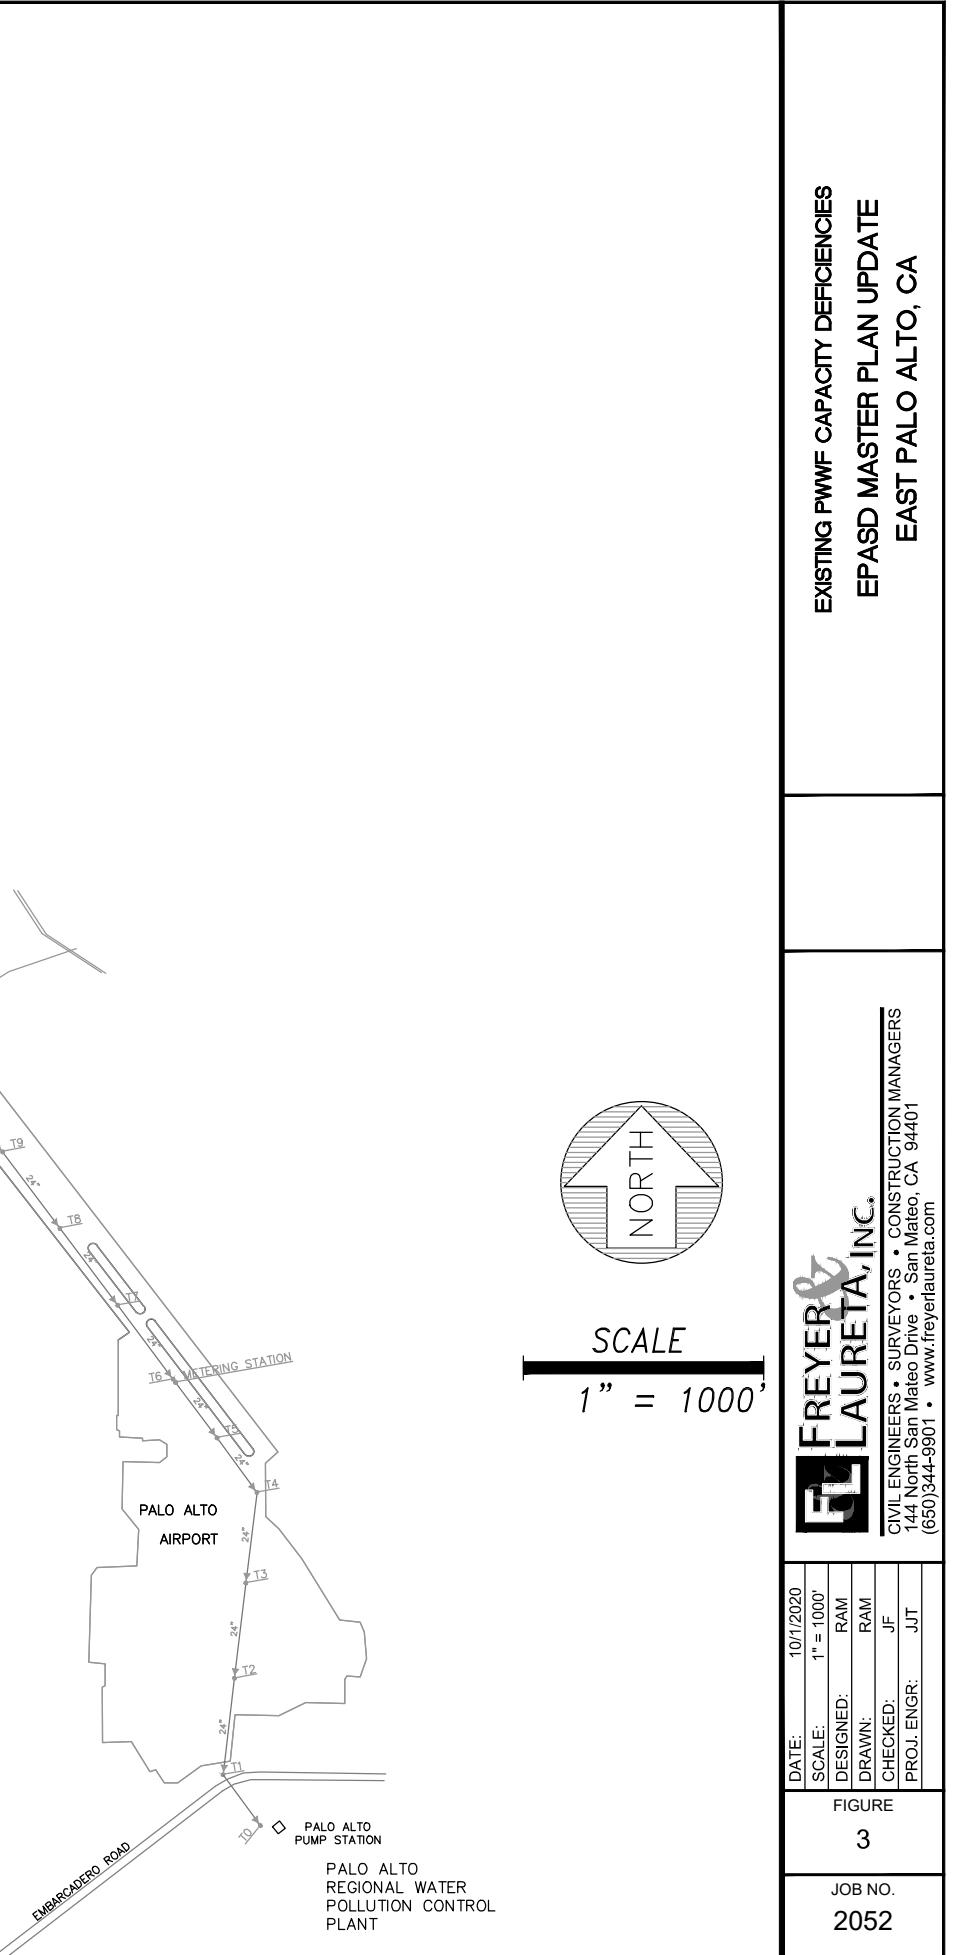

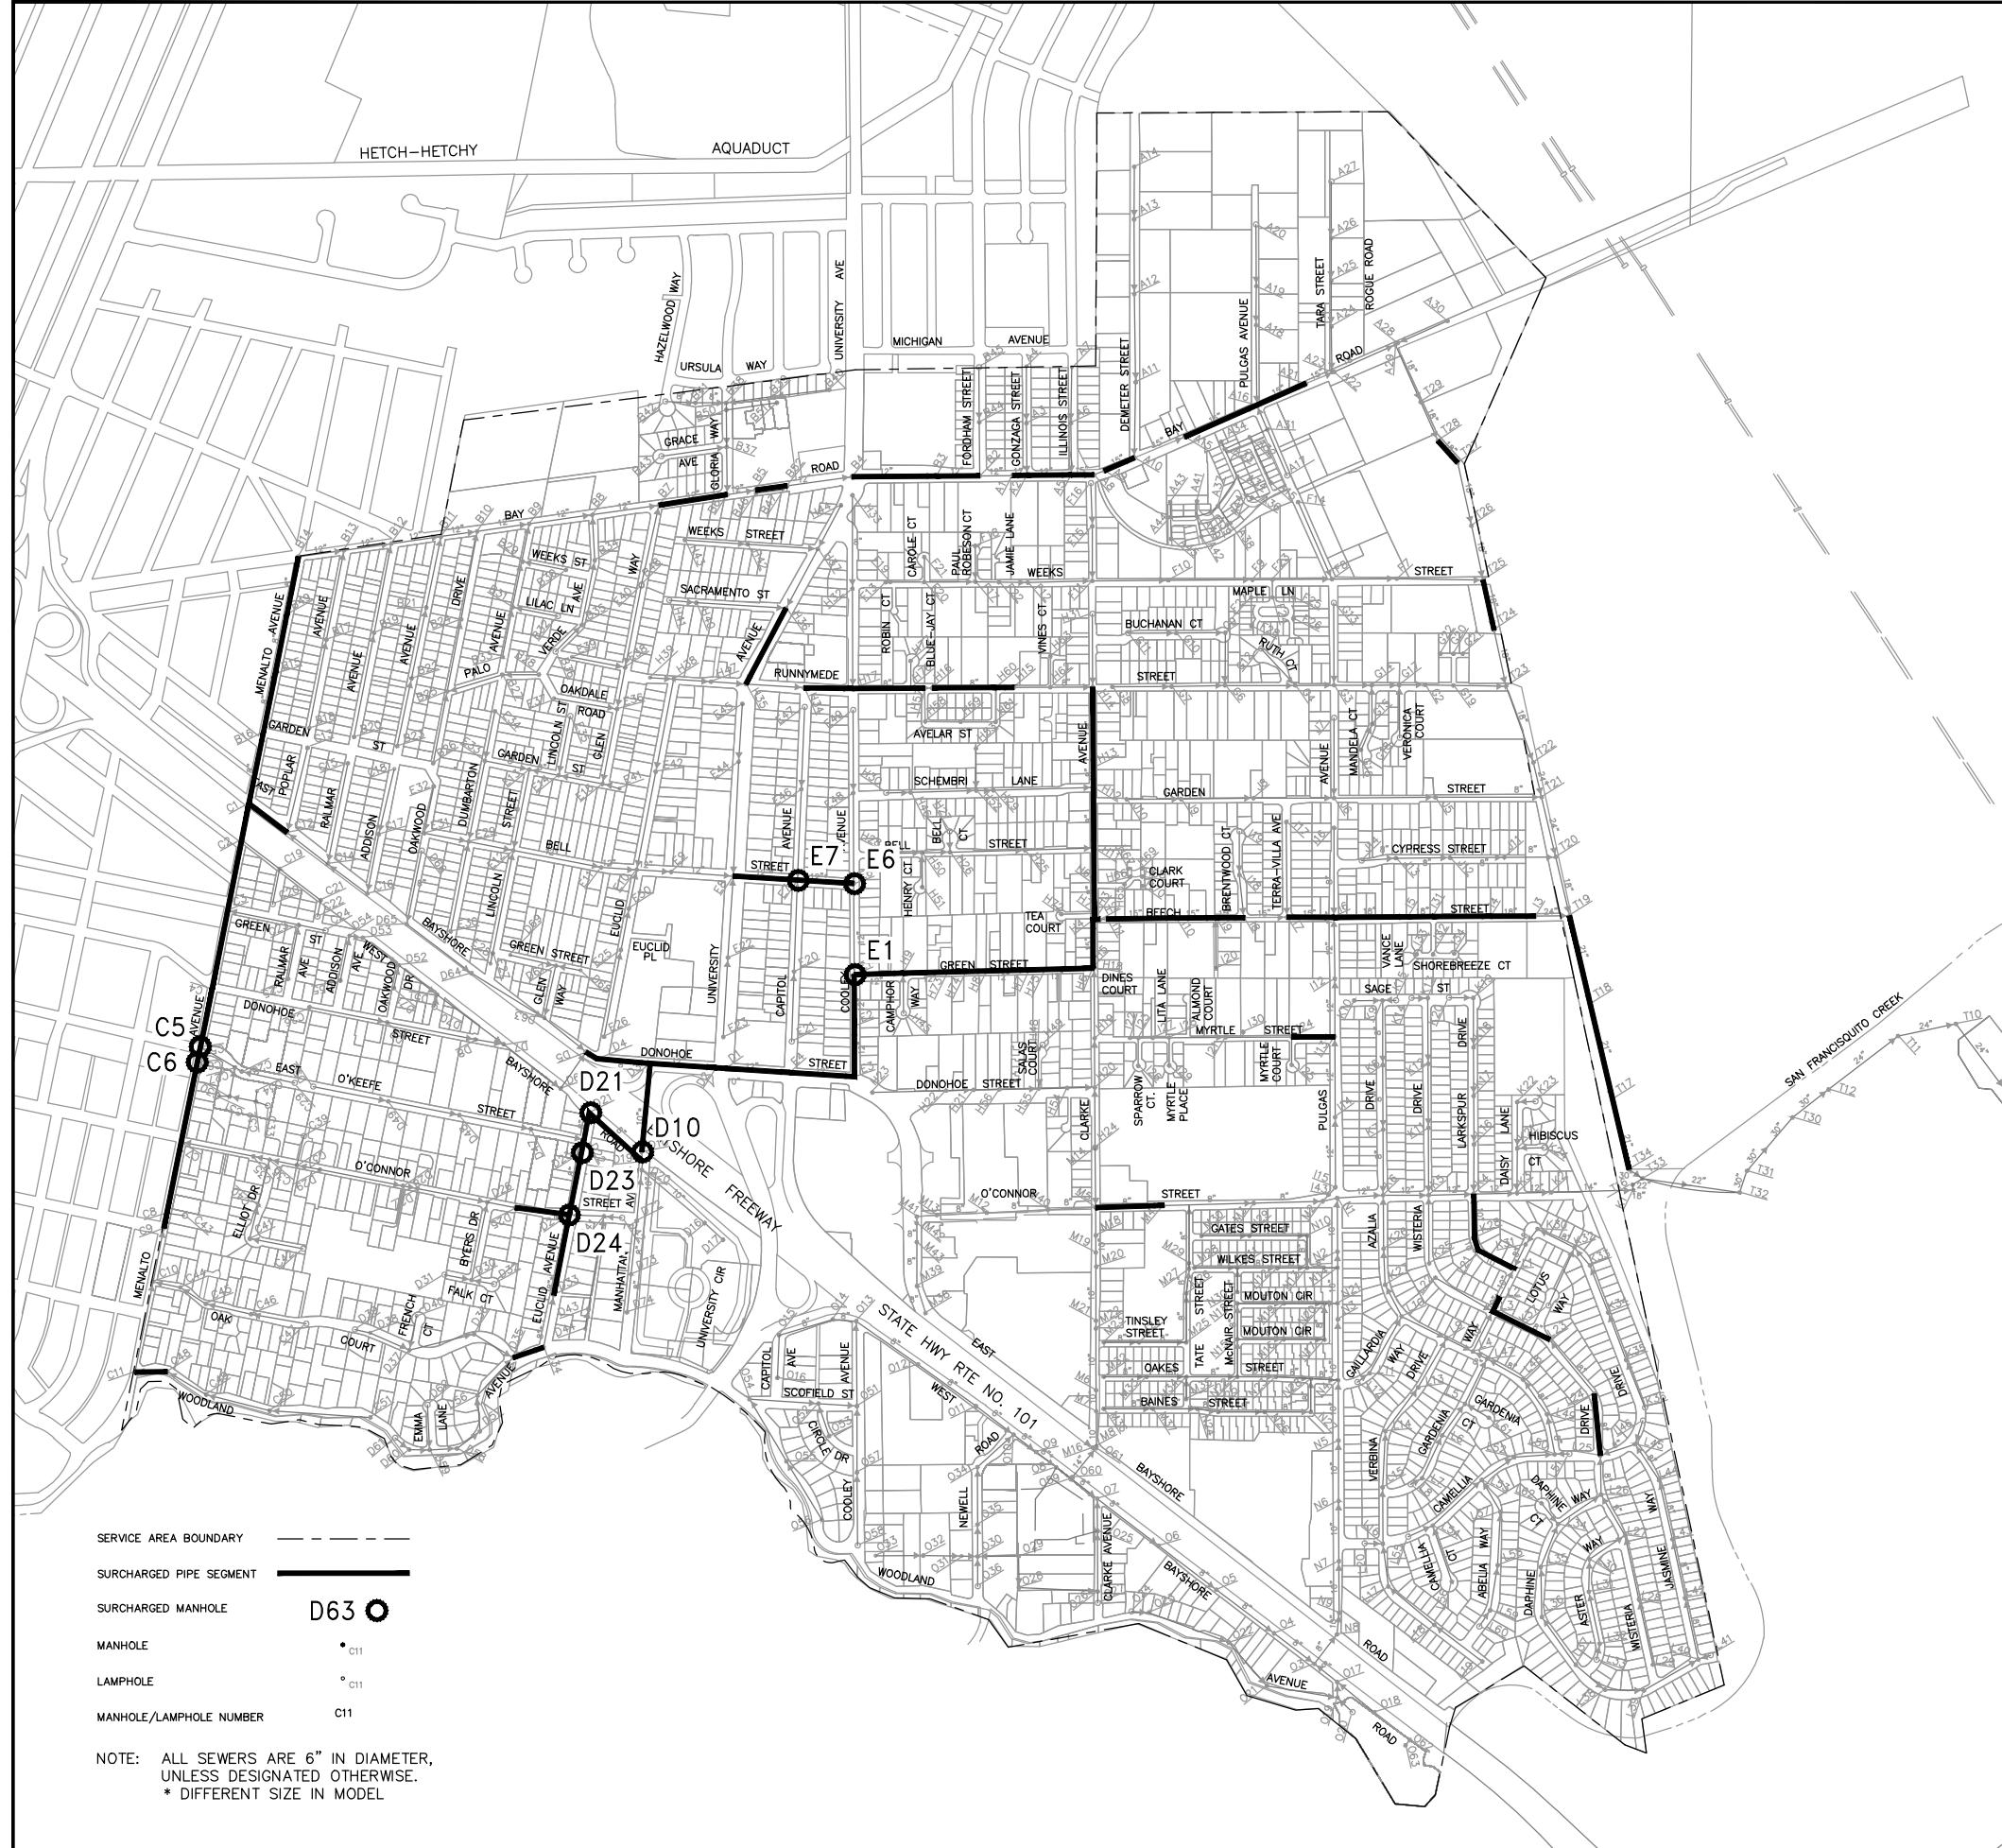

Item No.	Description	Units	Quantity (2)	Unit Price	Budget
Conceptual Opinion of Probable Construction Cost					
1	Mobilization	ls	1	\$ 50,000	\$ 50,000
2	Traffic Control	ls	1	\$ 20,000	\$ 20,000
3	Sheeting, Shoring, and Bracing	ls	1	\$ 20,000	\$ 20,000
4	6-inch DR 17 HDPE Pipe	lf	2,810	\$ 150	\$ 421,500
5	8-inch DR 17 HDPE Pipe	lf	4,440	\$ 200	\$ 888,000
6	10-inch DR 17 HDPE Pipe	lf	5,590	\$ 250	\$ 1,397,500
7	12-inch DR 17 HDPE Pipe	lf	6,320	\$ 300	\$ 1,896,000
8	14-inch DR 17 HDPE Pipe	lf	290	\$ 350	\$ 101,500
9	15-inch DR 17 HDPE Pipe	lf	5,310	\$ 400	\$ 2,124,000
10	16-inch DR 17 HDPE Pipe	lf	1,840	\$ 450	\$ 828,000
11	18-inch DR 17 HDPE Pipe (3)	lf	8,590	\$ 550	\$ 4,724,500
12	20-inch DR 17 HDPE Pipe	lf	650	\$ 600	\$ 390,000

16	30% Contingency	%	30%	\$ 19,316,500	\$ 5,794,950
Subtotal - Conceptual Opinion of Probable Construction Cost					\$ 25,111,500
Engineering and Administration Cost					
17	Design	%	10%	\$ 25,111,500	\$ 2,511,150
18	Environmental/Permitting	%	10%	\$ 25,111,500	\$ 2,511,150
19	Construction Management/ Inspection	%	15%	\$ 25,111,500	\$ 3,766,725
20	District Administration	%	5%	\$ 25,111,500	\$ 1,255,575
Subtotal - Engineering and Administration Cost					\$ 10,044,600
Total Conceptual Opinion of Probable Project Cost					\$ 35,156,100

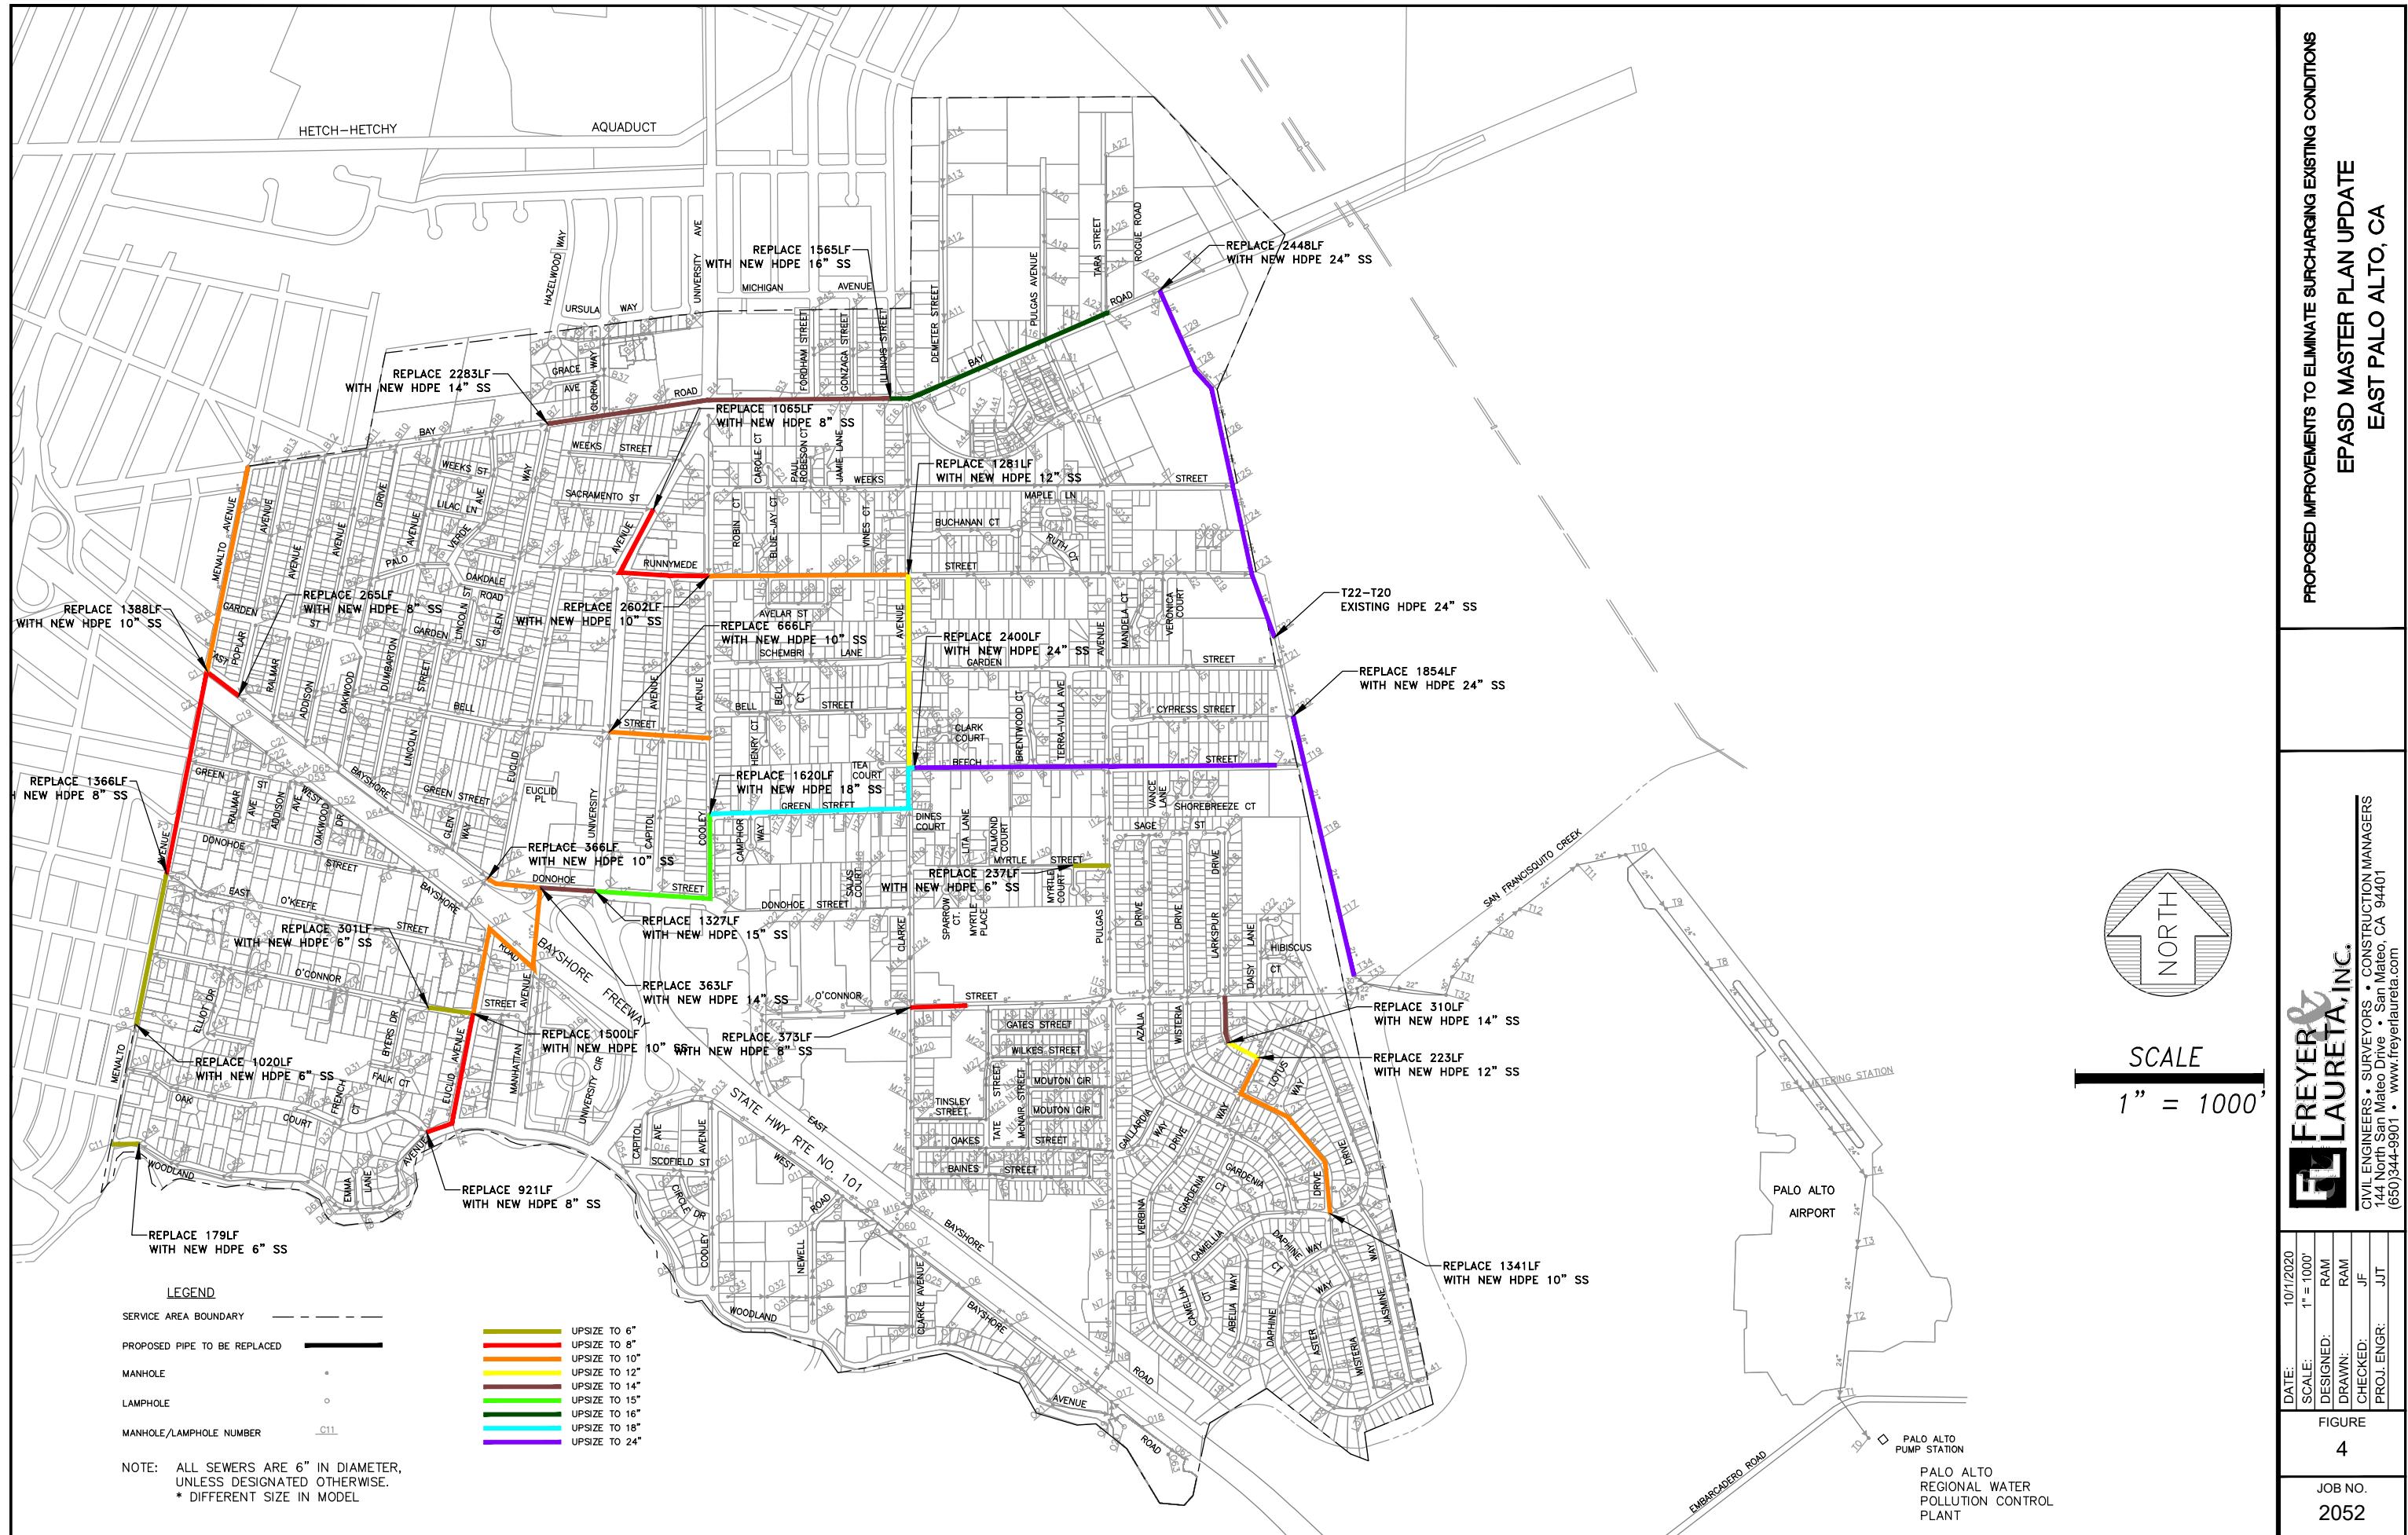

Notes

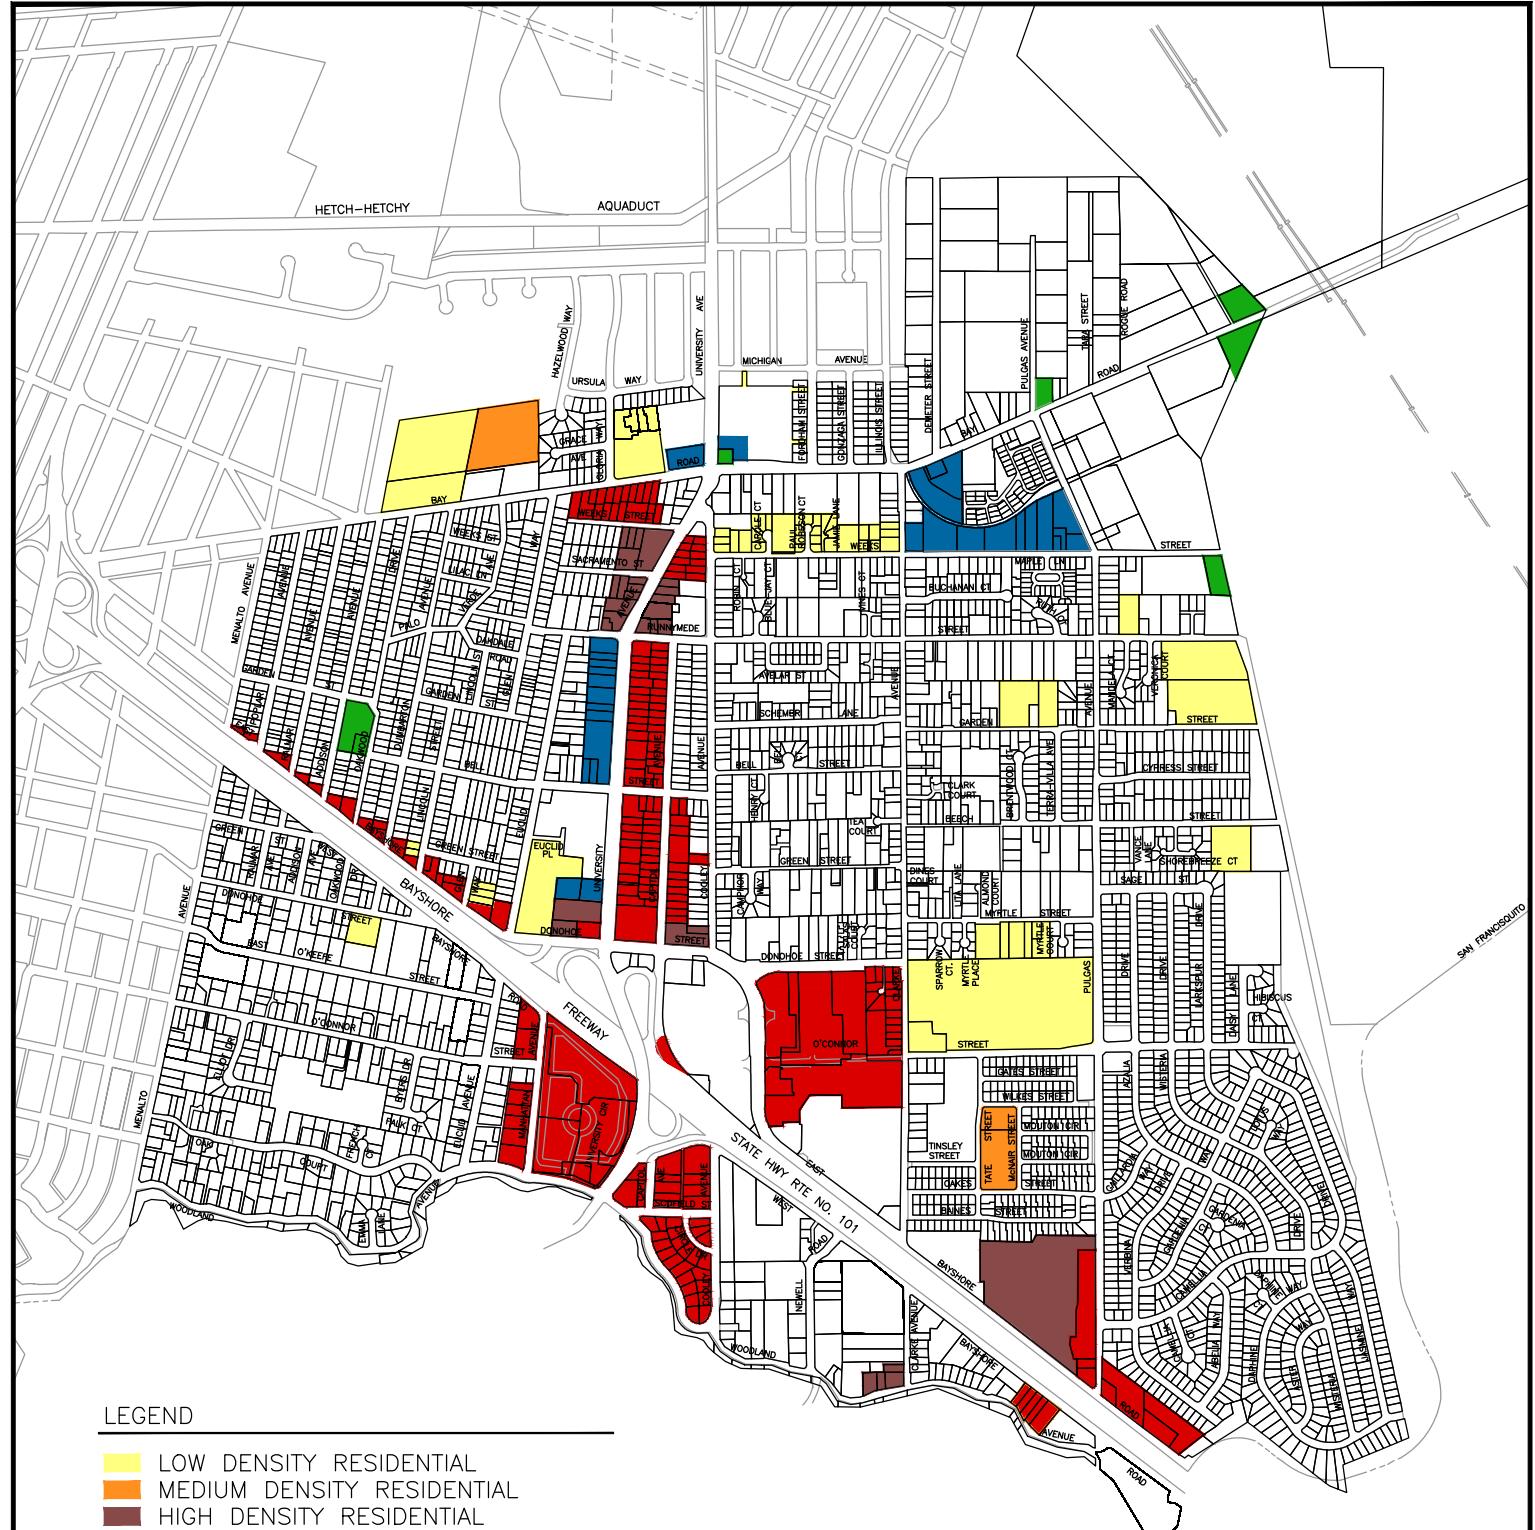

- (1) See Table 16 and Figure 10 for limits of improvements.
- (2) Quantities rounded to nearest 10 feet.
- (3) Includes new parallel wet weather sewer main.
